1 Safety

1.01 Directives

This machine was built in accordance with the European regulations stated in the Conformity and Manufacturer’s Declaration.
In addition to this Instruction Manual, also observe all generally accepted, statutory and other regulations and legal requirements - also those of the country in which the machine will be operated - and all valid environmental protection regulations!
Applicable local regulations of the social insurance society for occupational accidents or other supervisory organizations are to be strictly adhered to!

1.02 General notes on safety

- This machine must only be operated by adequately trained operators and only after having completely read and understood the Instruction Manual!
- All Notes on Safety and Instruction Manuals of the motor manufacturer are to be read before operating the machine!
- The Danger and Safety Instructions on the machine itself are to be followed!
- This machine must only be used for the purpose for which it is intended and must not be operated without its safety devices. All applicable safety regulations must be observed.
- When sewing parts (e.g. needle, presser or bobbin) are exchanged, when the machine is being threaded, when the machine is left unattended and during maintenance work, the machine is to be separated from the power supply by turning off the On/Off switch or removing the plug from the mains!
- Daily maintenance work must only be carried out by appropriately trained personnel!!
- Repair work and special maintenance work must only be carried out by specialists or appropriately trained personnel!!
- Work on electrical equipment must only be carried out by appropriately trained specialist personnel!!
- Work is not permitted on parts and equipment which are connected to the power supply! Exceptions to this are contained in the regulations EN 50110.
- Modifications and alterations to the machine must only be carried out pursuant to all relevant safety regulations!
- Only spare parts which have been approved by us are to be used for repairs! We expressly point out that any replacement parts or accessories not supplied by us have not been tested and approved by us. The installation and/or use of any such products may result in negative changes to the constructional characteristics of the machine. We are not liable for any damage which may be caused by non-original parts.
Safety

1.03 Safety symbols

⚠️ Danger!
Points to be observed!

⚠️ Danger of injury to operating and specialist personnel!

⚠️ Warning, electric voltage!

Caution
Do not operate without finger guard and safety devices.
Before threading, changing bobbin and needle, cleaning etc. switch off main switch.

1.04 Important points for the user

- This Instruction Manual is a component part of the machine and must be available to the operating personnel at all times.
The Instruction Manual must be read before operating the machine for the first time.

- The operating and specialist personnel is to be instructed on the safety equipment of the machine and regarding safe work methods.

- It is the duty of the user to only operate the machine in perfect running order.

- It is the obligation of the user to ensure that none of the safety mechanisms are removed or deactivated.

- It is the obligation of the user to ensure that only authorized persons operate and work on the machine.

Further information can be obtained at the point of sale.
1.05 Operating and specialist personnel

1.05.01 Operating personnel

Operating personnel are persons responsible for the preparation, operating and cleaning of the machine as well as taking care of problems arising in the sewing area.

The operating personnel is obliged to observe the following points and must:

- always observe the Notes on Safety in the Instruction Manual!
- never use any working methods which could reduce the level of safety in using the machine!
- not wear loosely fitting clothing or jewelry such as chains or rings!
- also ensure that only authorized persons have access to the potentially dangerous area around the machine!
- always immediately report to the user any changes in the machine which may reduce its level of safety!

1.05.02 Specialist personnel

Specialist personnel are persons who have completed expert education/training in the fields of electrics, electronics and mechanics. They are responsible for the lubrication, maintenance, repair and adjustment of the machine.

The specialist personnel is obliged to observe the following points and must:

- always observe the Notes on Safety in the Instruction Manual!
- switch off the On/Off switch before carrying out adjustments or repairs and ensure that it cannot be switched on again unintentionally!
- never work on parts and devices which are still connected to the power supply! The only exceptions to this directive are found in the regulations EN 50110.
- replace the protective coverings and close the electrical control box after all repairs or maintenance work!
Safety

1.06 Danger

- A working area of 1 meter is to be kept free both in front of and behind the machine while it is in operation, so that it is always easily accessible.

- Never reach into the sewing area while sewing!
  Danger of injury by the needle!

- Never leave objects on the table while adjusting the machine settings! Objects can become trapped or be slung away!
  Danger of injury by hurled objects!

- Do not operate the machine without protective covers 1, 2, 3, 4, and 5!
  Danger of crushing between moving parts of the pneumatic or feed systems!

- Do not operate the machine without take-up lever guard 6!
  Danger of injury by the movement of the take-up lever!

- Do not operate the machine without the finger guard 7!
  Danger of injury by the needle!

- Do not put your hands or fingers in needles 8 of the fabric retainer!
  With the needle strip engaged (needles up) there is danger of injury near the needle strip due to the projecting needles!

Proper use

2 Proper use

The PFAFF 3588-04/020 and PFAFF 3588-14/020 is used for folding and sewing on pockets on jeans, workwear and similar garments.

Any and all uses of this machine which have not been approved of by the manufacturer are considered to be inappropriate! The manufacturer cannot be held liable for any damage caused by the inappropriate use of the machine! The appropriate use of the machine means that all operational, adjustment, maintenance and repair measures required by the manufacturer are to be observed!
Specifications

3 Specifications

Sewing head: .......... PFAFF sewing head for mechanized sewing units with vertical hook

Max. speed:
PFAFF 3588-04/020 ..................................................................................... max. 4000 spm
PFAFF 3588-14/020 ..................................................................................... max. 3600 spm

Stitch length: ..................................................................................................... max. 6 mm

Stitch type: .................................................................................................. 301 (lockstitch)

Needle system: ................................................................................................. 134, 1955

Needle size: ................................................................................................. 100 - 140 Nm / MR3 - MR5

Sewing motor: .............................................................................................. PFAFF Syncro 6040
Motor speed: .............................................................................................. max. 4000 rpm

Connection voltage: ............................................................................ 230 V, 50 - 60 Hz AC

Power requirement: ................................................................................................. 2.2 kW

Max. control range:
PFAFF 3588-04/020 ...................................................................................... 250 x 250 mm
PFAFF 3588-14/020 ...................................................................................... 280 x 280 mm

Storage capacity: ................................................................................................. 320 KB

Working air pressure: ........................................................................................... min. 6 bar

Air consumption: .................................................................................... approx. 25 l / cycle

Noise data
Emission sound pressure level at the workplace at a sewing speed of 3600 spm ...., $L_{pA} < 78$ dB(A)

Dimensions of machine:
Length: ................................................................................................... approx. 2250 mm
Width: ..................................................................................................... approx. 1150 mm
Height: .................................................................................................... approx. 1450 mm
Table height: ............................................................................................... 870 - 1170 mm

Net weight: ............................................................................................................... 600 kg

^ Subject to alteration

■ $K_{pA} = 2.5$ dB
Disposal of the machine

4 Disposal of the machine

● The proper disposal of the machine is the responsibility of the customer.

● The materials used for the machine are steel, aluminium, brass and various plastics. The electrical equipment consists of plastics and copper.

● The machine must be disposed of in accordance with applicable local environmental protection regulations. If necessary, a specialist is to be commissioned.

> Special care is to be taken that parts soiled by lubricants are separately disposed of in accordance with the applicable local environmental protection regulations!
5 Transport, packaging and storage

5.01 Transport to the customer’s premises
Within Germany, machines are delivered without packaging. Machines for export are packaged.

5.02 Transport within the customer’s premises
The manufacturer bears no liability for transport within the customer’s premises or to the location of use. The machine may only be transported in an upright position.

5.03 Disposal of the packaging
The packaging of these machines consists of paper, cardboard and VCE fiber. The proper disposal of the packaging is the responsibility of the customer.

5.04 Storage
The machine can be stored for up to 6 months if not in use. During this time it should be protected from dust and moisture. For longer storage the individual parts of the machine, especially the moving parts, should be protected against corrosion, e.g. by a film of oil.
Explanation of the symbols

In this Instruction Manual, tasks to be carried out and important information are drawn to your attention by symbols. The symbols have the following meanings:

- **Note, information**

- **Cleaning, care**

- **Lubrication**

- **Servicing, repairing, adjustment, maintenance**
  (only to be carried out by specialist personnel)

7 Controls

7.01 On/off switch

By turning on/off switch 1, the power supply to the machine is switched on or off.

7.02 Stop switch

By pressing the stop switch 1, the complete work cycle is stopped.

Refer to chapter 10.04 Program interruption.
## Controls

### 7.03 Switch for the loading function

![Diagram of the switch 1](image)

- The function of the switch 1 can be adapted to the various requirements for loading the workpiece.

The foot switch is adjusted via the menu. Refer to chapter 11.05 Functions in the INPUT mode.

With the needle strip engaged (needles up) there is danger of injury near the needle strip due to the projecting needles!

By selecting the functions BASIC POSITION POCKET PLATE FRONT or BASIC POSITION POCKET PLATE BACK and by switching the function UNI-MATERIAL on or off, the following menu combinations can be created:

<table>
<thead>
<tr>
<th>Menu combinations</th>

## Controls

### 7.04 Double-start keys

- In **MANUAL** operation mode, when both double-start keys 1 are activated simultaneously the folder is moved forward and lowered.
- In **AUTOMATIC** operation mode, when both double-start keys 1 are activated simultaneously the entire program sequence is started.
- The double-start keys 1 also are used to continue the program after the bobbin has been replaced or the program has been interrupted.

### 7.05 Handwheel

- By turning and simultaneously pushing the handwheel 1 in, the needle bar can be positioned manually as required.
7.06 Control panel

The control panel consists of the display and two key panels.

7.06.01 Display

In the basic screen the messages in the display are divided into three sections:

**Status bar**
The status bar is in the upper section of the display. Here, up to 5 pictograms with the corresponding values can be displayed (refer to chapter 10.01 Status bar).

**Text field**
The text field is in the middle section of the screen. Here, messages can be displayed in 2 lines.

**Pictogram bar**
The pictogram bar is found at the bottom of the display. Here, symbols are displayed whose corresponding function can be called up via the number keys. Active functions are shown by a symbol displayed on a dark background.

Example:

Normal symbol (function not active)
The manual sewing function is not activated, but the automatic sewing function is activated.

Symbol on dark background (function active)
Manual sewing is activated.
**Controls**

7.06.02 Operation-mode keys

By pressing the corresponding key, one of two possible operation modes can be selected. The selected mode is indicated by the light emitting diode in the respective key.

![SEWING mode](image)

![INPUT mode](image)

7.06.03 Function keys

Arrow keys (right/left)
- To jump to another menu page
- To position the cursor when entering several values in one line

Plus/Minus keys
- To select the +/- sign on input values
- To raise and lower input values

Esc key
- To interrupt functions without taking on the value entered
- To return to superordinate menu functions

Clear key
- To reset the input value to 0

Enter key
- To confirm an input value
- To acknowledge an error after an error message

7.06.04 Number keys

![Number keys](image)

Below the display there is a row of number keys (1 - 0). Depending on the current operating mode, these keys have the following functions:

- carrying out the function shown by the symbol displayed above the number key
- entering a numerical value
- selecting functions or menu levels
Contents

8 Mounting and commissioning the machine .......................................................... 8 - 1
8.01 Mounting ........................................................................................................ 8 - 1
8.02 Removing the transit support bracket .......................................................... 8 - 2
8.03 Mounting the spool holder ........................................................................... 8 - 2
8.04 Commissioning .............................................................................................. 8 - 3
8.05 Turning the machine on/off ......................................................................... 8 - 4
8.06 Disk drive and PC interface .......................................................................... 8 - 4
8.07 Adjusting zero point ..................................................................................... 8 - 5
Mounting and commissioning the machine

After unpacking the machine, check it for any transport damage. In case of damage, inform the shipping company and the responsible PFAFF dealer.

The machine must only be mounted and commissioned by qualified personnel! All relevant safety regulations are to be observed!

8.01 Mounting

At the machine’s location, there must be a stable and horizontal surface as well as suitable electricity and compressed air supplies (see chapter 3 Specifications).

- Lift the machine with a forklift from the shipping pallet.

For machines without vertical adjustment:
- Align the machine horizontally just above the floor and move the four legs accordingly before setting the machine down on the ground.

For machines with vertical adjustment:
- Set down the machine on the ground and align it by turning the four spindles.

The vertical adjustment is available as an optional feature.

Fig. 8-01 shows a machine with vertical adjustment.
8.02 Removing the transit support bracket

Before the machine is commissioned, transit support bracket 1 must be removed!

Transit support bracket 1 serves to secure the sewing machine during transit and must not be used during sewing.

8.03 Mounting the spool holder

Mount the spool holder according to Fig. 8.03.
Mounting and commissioning the machine

8.04 Commissioning

- Clean the whole machine thoroughly and check the electrical leads and pneumatic connecting tubes for any damage.

- Make sure that the mains voltage corresponds to the connection voltage of the machine (see chapter 3 Specifications). If the mains voltage and the connection voltage differ, the machine must not be operated under any circumstances.

- Have specialists connect the machine to the mains.

- Oil the machine and/or fill with oil (see chapter 12 Care and maintenance).

- Connect machine to the compressed air system. The manometer on the air filter/lubricator unit must display a pressure of 6 bar. If necessary, set to the correct value (see chapter 12.05 Checking / regulating air compression).
Mounting and commissioning the machine

8.05 Turning the machine on/off

- Check air pressure on the manometer 1. If necessary, adjust the air pressure on adjusting knob 2.
- Turn On/Off switch 3 to position "I".

After the machine has been switched on, it is always in the automatic sewing mode.

When commissioning the machine, the zero point must be checked and, if necessary, adjusted (see chapter 8.07 Adjusting zero point).

- To switch off the machine, turn the On/Off switch 3 to position "O".

8.06 Disk drive and PC interface

- Disk drive 1 can be used to read in seam programs and operating software.
- Socket 2 is for connecting the programming system OSCA.

With OSCA existing CAD data records can be used to generate seam programs.
8.07 Adjusting zero point

It is necessary to adjust the zero point when the machine is commissioned and after replacing the Controller or one of the proximity switches of the sewing jig transport.

- Select INPUT mode.
- Select Input menu function (number key 0).
- Select the SERVICE function.
- Select the ADJUST ZERO POINT function.
- Enter the code number via the number keys.

The four-digit code number (factory setting: 3588) can be altered via the menu functions. Please see chapter 11.03 Summary of the service functions and 11.05 Functions in the INPUT mode.

Gauge position

- Select the GAUGE POSITION function.
- Press the plus key to position the sewing jig transport in the gauge position.

- Check if adjustment pin 1 can be inserted in the holes of the sewing jig and table when the sewing jig is in this position.
Mounting and commissioning the machine

If required, correct the position of the sewing jig with the number keys (according to the function shown in the display).

Confirm by pressing Enter and remove adjustment pin 1 from the holes.

Needle position

Select the NEEDLE POSITION function from the menu for adjusting the zero point.

Press the plus key to position the sewing jig transport in needle position.

Secure adjustment pin 1 in the needle bar using screw 2.

Check by turning handwheel 3 whether the adjustment pin 1 can be guided into the adjustment hole of the sewing jig.
Mounting and commissioning the machine

If required, correct the position of the sewing jig with the number keys (according to the function shown in the display).

Confirm by pressing Enter, loosen screw 2 and remove adjustment pin 1.

Folder position

Select the FOLDER POSITION function from the menu for adjusting the zero point.

Press the plus key to position the sewing jig transport in folder position.

Check whether adjustment pin 1 can be guided into the adjustment hole of the sewing jig and the pocket plate.
Mounting and commissioning the machine

If necessary, correct the position of the sewing jig in the X-direction using the number keys according to the functions shown in the display.

Set the value for the Y-direction at “0” and if necessary correct the position of the pocket plate according to Chapter 13.06.05, Pocket plate position, front.

Verify the input by pressing the Enter key and remove the blocking pin.

Select Sewing mode.

If you have not entered and selected a sewing program (see chapter 9.06 Selecting a seam program) an error message will be displayed.

Select the basic position function.

(The machine is ready for operation.)

9.10 Changing the part set ..................................................... 9 - 11
9.11 Loading of the cuttings ................................................... 9 - 12
9 Preparation

All regulations and instructions in this Instruction Manual are to be observed!
Special attention is to be paid to the safety regulations!

All preparation work is only to be carried out by appropriately trained personnel!

9.01 Inserting the needle

Turn the machine off!
Danger of injury if the machine starts up suddenly!

Only use 134 or 1955 system needles!

- Raise the needle bar to its highest position by turning the handwheel.
- Loosen screw 1 and insert needle 2 in the needle bar as far as it will go.
- Align needle 2 in such a way that the long needle groove is pointing to the folder station and tighten screw 1.
9.02 Winding the bobbin thread / adjusting the thread tension

- Place an empty bobbin 1 onto shaft 2.
- Thread the bobbin in accordance with Fig. 9-02 and wind it clockwise around bobbin 1 a few times.
- Cut thread end using thread cutter 3.
- Switch on the bobbin winder by pressing the spindle 2 and cam 4 simultaneously.

The bobbin 1 fills up while you are sewing.

- The thread tension on bobbin 1 can be adjusted with screw 5.
- The bobbin winder stops automatically when bobbin 1 is full.

To adjust the filling amount, see chapter 13.05.22 Bobbin winder.

If the thread is wound unevenly:
- Loosen nut 6.
- Turn thread guide 7 accordingly.
- Tighten nut 6.
9.03 Changing the bobbin / adjusting the bobbin thread tension

Automatic SEWING

- If the number of the stitches previously entered via the BOBBIN-THREAD PRESELECT function (see chapter 11.05 Functions in the INPUT mode) has been carried out, the sewing jig automatically moves to the folder station and stops there. The hook compartment cover 1 opens.
- Change bobbin / adjust bobbin thread tension (see next section).
- Confirm bobbin change by pressing Enter.
- Press double-start keys (see chapter 7.04 Double-start keys).
  (The program cycle continues).

Manual SEWING

- Select Change bobbin function (number key 8).
- Change bobbin / adjust bobbin thread tension (see next section).
- Press double-start keys (hook compartment cover closes).

To change the bobbin/To adjust the bobbin thread tension:

- Lift latch 2 and remove empty bobbin.
- Insert a full bobbin into the hook so that it rotates in the direction of the arrow when pulling the thread.
- Close latch 2.
- Guide the thread first through the groove, then around the horn of bobbin case 3 and finally into the recess of latch 2.
- Adjust the bobbin thread tension by turning screw 4.
9.04 Threading the needle / adjusting the needle thread tension

- Lower presser foot 1 (number key 2).
  (Thread trapper 2 opens).
- Thread the needle according to Fig. 9-04.
- Adjust the needle thread tension by turning knurled screws 3.
- Raise presser foot 1 (number key 2).
  (Thread trapper 2 closes.)

The secondary tension can be adjusted by turning knurled screw 4.
9.05 Selecting a language

- Select **INPUT** mode by pressing the respective key.

- Depending on the setting and configuration of the machine the displayed status bar may differ from the following example.

- Select the **input menu** function (number key 0).

- Select the **SWITCH FUNCTIONS** function with **number key 4**.

- Select the **LANGUAGES** function with **number key 2**.

- Select the desired language with the **number keys 1 - 7**:
  1 = D
  2 = GB
  3 = F
  4 = E
  5 = I
  6 = PL
  7 = TR

- The language selected is assumed immediately once the corresponding number has been entered.
Selecting a seam program

When changing to a different seam program, please make sure that the part set (folder, pocket plate and sewing jig) correspond to the new seam program. If the wrong combination of parts and seam program is used, the machine may be damaged seriously!

- Select INPUT mode by pressing the respective key.

Depending on the setting and configuration of the machine the displayed status bar may be different from the following example.

- If required, press right arrow key to go to parts program number selection.
- Select a previously entered parts program using the number keys.

It is possible to transfer seam programs from a disk to the machine memory. To do this, a disk drive must be connected (see chapter 8.06 Connecting a disk drive) and the READ/WRITE PROGRAM function must be selected (see chapter 11.05 Functions in the INPUT mode).

If you want to create a seam program on the control panel, use the CREATE/MODIFY PROGRAMM function (see chapter 11.05 Functions in the INPUT mode).
9.07 Automatic change in program station

If you want to change back and forth between two seam programs, a program must be stored in each of both program stations (see chapter 9.06 Selecting a seam program).

- Select the INPUT mode by pressing the respective key.

 Depending on the setting and configuration of the machine the displayed status bar may differ from the following example.

- Activate the Automatic change in program station function (number key 4).

- Select the program station with which you would like to start (number keys 1 or 2).

 The part program number belonging to the program number also changes automatically.
**Preparation**

### 9.08 Edge folder configuration

With this function enabled, the program stations (A and B) may have different edge-folder configurations assigned to them.

- Press the key to call up the INPUT mode.

Depending on the machine position and configuration, the illustration of the status line may differ from the following example:

- Call up the edge folder functions (number key 8).

- Scroll through the menu page using the right arrow key.

- Call up the EDGE FOLDER CONFIGURATION function.

- Switch the function on or off using number keys 1 or 0.

Using the EDGE FOLDER CONFIGURATION function (number key 2) is possible to change the edge-folder configuration as required.

**Example:**

**A**
- Y6 - 1
- Y7 - 0
- Y8 - 1
- Y9 - 1

**B**
- Y6 - 0
- Y7 - 1
- Y8 - 1
- Y9 - 1
9.09 Jig monitor (optional)

To make it possible to monitor the jig, the sewing jig is given a code using magnets which
the control can recognize via an additional device. This is a means of preventing pairing a
sewing program with the wrong sewing jig which could cause the needle to break.
If the machine is equipped with this optional device, the JIG MONITOR function must be
activated, and a jig code must be entered in the sewing program in order to use the jig
monitor.

9.09.01 Activating jig monitor

● Select the INPUT mode by pressing the respective key.

   Depending on the setting and configuration of the machine the displayed status
   bar may differ from the following example.

![Status bar example](image)

   1 2 3 4 5 6 7 8 9 0 Enter

Fig. 9 - 10

● Select the Input menu function (number key 0).

● Select the SWITCH FUNCTIONS function.

● Select the OPTIONS function.

● Select the JIG MONITOR function.

1 or 0 ● Activate or deactivate the function by pressing the number keys 1 or 0 respectively.
9.09.02 Determining the jig code

The jig code is entered in the sewing program as a number value (0-99). The code is created on the jig as a binary number by arranging up to 8 magnets in a particular way on carrier 1.

Bit assignment

Example: decimal number (35) is equal to the binary combination (1100 1010).

<table>
<thead>
<tr>
<th>Ones place</th>
<th>Bit 0</th>

</table>
9.10 Changing the part set

The seam program, parts program and parts (folding set, pocket plates and sewing jig) must match and always be used together!
If the wrong combination of parts and seam program is used, the machine may be damaged seriously!

- Select **INPUT** mode.
- Select **Folder position** function (number key 8).
- Select **PART SET** function.
  - Loosen screws 1 and 2, and remove both sewing jig 3 and pocket plate 4.
  - Insert a new pocket plate and a matching sewing jig.
  - Tighten screws 1 and 2.
- Confirm the new pocket plate and sewing jig by pressing the **plus key**.
  - Unscrew the compressed air supply 5.
  - Loosen screw 6 and remove folder set 7.
  - Insert the folder set which matches the pocket plate and the sewing jig, tighten screw 6 and screw the compressed air supply 5 back on.
- Select **INPUT** mode.
- Select the **Program number selection** function and enter the program and parts program numbers which correspond to the part set.
- Confirm by pressing **Enter**.
9.11 Loading of the cuttings

- Select the **SEWING** mode.
- Select the **Basic position** function.
- Lay the cutting for the trousers on the table and align it.

Loading and alignment of the pocket cuttings depends on the menu combination selected (see chapter 7.03).

Menu combination: BASIC POSITION POCKET PLATE FRONT/PLAIN-MATERIAL FABRIC ON

- Slide the pocket cutting onto the pocket plate according to Fig. 9-12.

Menu combination: BASIC POSITION POCKET PLATE BACK/PLAIN-FABRIC ON

- Actuate the loading function switch twice pocket plate moves forward.
- Slide the pocket cutting onto the pocket plate according to Fig. 9-12.

Menu combination: BASIC POSITION POCKET PLATE FRONT/PLAIN-MATERIAL OFF

- Slide the pocket cutting onto the pocket plate according to Fig. 9-12.
- Activate the inserting function switch - the pocket plate is lowered.
- Activate the inserting function switch to raise the pocket plate so that the trousers cutting can be aligned.
- Activate the inserting function switch to lower the pocket plate again.

Menu combination: BASIC POSITION POCKET PLATE BACK/PLAIN-MATERIAL OFF

- Actuate the loading function switch to move the pocket plate forward.
- Slide the pocket cutting onto the pocket plate according to Fig. 9-12.
- Actuate the loading function switch twice: the pocket plate is lowered and raised slightly to allow positioning of the trouser cutting.
- Actuate the loading function switch: the pocket plate is lowered and raised slightly to allow positioning of the trouser cutting.

Sewing

10 Sewing

In the SEWING mode you will find functions in automatic and manual SEWING which are used for production and its preparation. The mode can be selected via the corresponding keys on the control panel.

10.01 Status bar

In the upper section of the display the current machine status is displayed by means of symbols and corresponding values.

Explanation of the symbols:

Program station
Next to the symbol for the selected program station (A or B) you will find the assigned program number.

Parts program number
Next to this symbol the number of the current parts program is displayed.

Stitch length
Next to this symbol you will find the stitch length value for the selected seam program.

Maximum speed
Next to this symbol the maximum speed of the machine is indicated.

Piece-counter
Next to this symbol the current piece count is displayed.

10.02 Error messages

If an error occurs at the machine, an error message is displayed.

Before the machine can be further operated, the error must be corrected. Errors may only be corrected by authorized specialist personnel (see chapter 14.02 Error description).
10.03 Automatic SEWING

Automatic SEWING is used primarily in this type of production.

- Press the double-start keys (see chapter 7.04 Double-start keys) or
- activate the inserting function switch (see chapter 7.03 )

to start the program cycle after you have inserted the workpiece.
Depending on the stage of the cycle and the machine configuration, different symbols (functions) are displayed.

Basic position of the machine

When the machine has just been switched on, it is in the automatic SEWING mode. The sewing jig transport, folder and sewing station as well as the stacker station are in the basic position. The function Manual SEWING is switched off.

Explanation of the symbols in the display:

- Presser foot up/down (number key 2)
  Direct function for lifting and lowering the presser foot as well as for opening and closing the thread trapper.

- Retainer clamp up/down (number key 3)
  Direct function for opening and closing the retainer clamp at the stacker station (for removing the workpiece).

- Folding on/off (number key 5)
  (only when ALTERNATING FOLDING is selected)
  Direct function for manipulating the automatic alternating folding. If the symbol is displayed on a dark background, folding will be carried out in the next program cycle.

- Program station A (number key 7)/Program station B (number key 8)
  (The function Automatic program change must be switched on.)
  Direct function for manipulating the automatic program change. The program of the station whose symbol is displayed on a dark background will be executed next.

- Label feed on/off (number key 9)
  (only available if label feed mechanism is installed)
  Direct function for switching the label feed on or off respectively. If the symbol is displayed on a dark background, a label will be fed during the next program cycle.

- Switch on manual sewing (number key 0)
  With this function you can switch between automatic and manual SEWING. If this function is switched off, the automatic SEWING mode is active.
Machine in operation

Symbols in the display:

- Stop (number key 1)
  Direct function for stopping the entire program cycle (see chapter 10.04 Program interruption).

- Folding on/off (number key 5)

- Basic position (number key 6)
  With this direct function you can move the folder to its basic position without interrupting the program cycle. For example, this is useful if you want to align a workpiece which has been inserted incorrectly.

- Program station A (number key 7)

- Program station B (number key 8)

- Label feed on/off (number key 9)

10.04 Program interruption

To interrupt the program cycle of a seam program
- press the stop switch (see chapter 7.02 Stop switch) or
- activate the Stop function on the control panel.

When a program is interrupted, the following display appears:

When the machine is stopped in this way, the folder and stacker devices as well as the sewing station and the sewing jig transport do not position in the basic position!

- To continue the program cycle activate the Start function (number 1) or
- press the double-start key (see chapter 7.04 Double-start key).
10.05 Manual SEWING

Manual SEWING is predominantly used for checking and setting up the machine as well as for altering the program cycle manually.

- Select the Manual SEWING function (number key 0).

Fig. 10 - 06

Explanation of the symbols in the display:

- Start (number key 1)
  Direct function for starting the seam program cycle (sewing only).

- Presser foot up/down (number key 2)
  Direct function for raising and lowering the presser foot as well as for opening and closing the thread trapper.

- Sewing jig up/down (number key 3)
  Direct function for raising and lowering the sewing jig.
  press once = without pressure, press twice = with pressure

- Step-by-step forwards (number key 4) / Step-by-step backwards (number key 5).
  With this function the seam pattern can be traced step by step forwards or backwards, respectively; in combination with the Start function the entire seam pattern is traced automatically. To do this, press the Step-by-step forwards/backwards function simultaneously with the Start function.

- Basic position (number key 6)
  Direct function for positioning the folder, stacker and sewing stations and the sewing jig transport in basic position.

- Single step (number key 7)
  With this function the folding sequence can be traced step by step. For the first step the double-start keys or the inserting function switch have to be actuated.

- Change bobbin (number key 8)
  The bobbin can be changed after this function has been selected.

- Label feed on/off (number key 9)
  (only available if label feed mechanism is installed)
  Direct function for switching the label feed on or off respectively.
  If the symbol is displayed on a dark background, a label will be fed during the next program cycle.

- Switch off manual SEWING (number key 0)
  With this function you can switch between automatic and manual SEWING. If this function is active (symbol on a dark background), the program cycle is interrupted and you are in the manual SEWING mode.
11 Input mode functions

This chapter lists and describes the functions in the INPUT mode. In this mode you will find functions for program management, language selection, machine settings and configuration as well as for service and adjustment work. However, this chapter does not describe how to create seam programs. For information on how to create seam programs please refer to the relevant instruction manual.

11.01 Summary of the functions in the INPUT mode

**INPUT mode**

- Program station A
- Program station B
- Program number selection / Station key programming
- Automatic program station change
- Frame up/down
- Bobbin thread functions
  - 1 - RESET STITCH-COUNTER
  - 2 - BOBBIN-THREAD PRESELECT
- Head functions
  - 1 - STANDARD STITCH LENGTH
  - 2 - MAXIMUM SPEED
  - 3 - REDUCED SPEED
  - 4 - DELAY ZIGZAG ON
  - 5 - DELAY ZIGZAG OFF
  - 6 - SEWING
- Folder functions
  - 1 - INTERMEDIATE STOP
  - 2 - UNI-MATERIAL
  - 3 - BASIC POSITION POCKET PLATE
  - 4 - ALTERNATING FOLDING
  - 5 - ALTERNATING LABELLING
  - 6 - EDGE FOLDER CONFIGURATION
  - 7 - CHANGE PART SET
- Parts program functions
  - 1 - ROLLING DIRECTION STACKER
  - 2 - SLOW ROLLING TIME STACKER
  - 3 - FAST ROLLING TIME STACKER
  - 4 - TIME FOR STACK TRESTLE BACK
  - 5 - TIME FOR EDGE FOLDERS BACK
  - 6 - TIME FOR POCKET PLATE UP
  - 7 - FEED SPEED
  - 8 - SEAM CORRECTION X
  - 9 - SEAM CORRECTION Y
  - 0 - STACKER
- Input menu (see chapter 11.02 Summary of the functions in the input menu)
  - 1 - PROGRAM MANAGEMENT
  - 2 - CREATE / MODIFY PROGRAM
  - 3 - COUNTER
  - 4 - SWITCH FUNCTIONS
  - 5 - TIMES
  - 6 - SERVICE (see chapter 11.03 Summary of the service functions)
Summary of the functions in the input menu

1. PROGRAM MANAGEMENT
   1. DIRECTORY
   2. READ / WRITE PROGRAM
   3. DELETE PROGRAM
   4. FORMAT DISK
   5. STATISTICAL PROGRAM DATA
   6. DATA TRANSFER WITH PC

2. CREATE / MODIFY PROGRAM
   (see chapter 11.06 Creating / modifying seam programs)
   1. RESET PIECE-COUNTER
   2. THREAD MONITOR
   3. SLOW START-STITCHES
   4. CARRIAGE START (NIS)
   5. START FOR THREAD TRIMMING

3. COUNTER
   1. THREAD MONITOR
   2. THREAD MONITOR
   3. THREAD MONITOR
   4. THREAD MONITOR
   5. THREAD MONITOR

4. SWITCH FUNCTIONS
   1. THREAD MONITOR
   2. LANGUAGE SELECTION
   3. OPTIONS
   4. CONTINUOUS CARRIAGE MOVEMENT
   5. LOCK / RELEASE FUNCTIONS
   6. TIMES
   7. SERVICE

8. SERVICE (see chapter 11.03 Summary of the service functions)
Input mode functions

11.03 Summary of the service functions

For an explanation of the service functions please refer to chapter 11.05 Functions in the Input mode, page 11-16 ff.
11.04 Selecting functions from the menu

By using an example, we will now explain how to move about within menu levels.

Contrast setting of the display:

- Select **INPUT** mode by pressing the corresponding key (the LED in the key lights up).

![Fig. 11 - 01](image)

- Select **input menu function** (number key 0).

![Fig. 11 - 02](image)

- Press **number key 6** to call up the **SERVICE** function.

![Fig. 11 - 03](image)

- Scroll to the next page by pressing the **right arrow key**.

![Fig. 11 - 04](image)

- Select **OTHER FUNCTIONS** by pressing **number key 7**.

The menu item can also be accessed directly, i.e. without scrolling the page, by pressing the corresponding number key.
Input mode functions

- WRITE MACHINE DATA ON DISK
- READ MACHINE DATA FROM DISK
- CARRY OUT COLD START
- DISPLAY SOFTWARE STATUS
- CONTRAST SETTING OF DISPLAY
- CHANGE CODE NUMBER

**Fig. 11 - 05**

- Select the CONTRAST SETTING OF DISPLAY function (number key 5).
- If required, enter the 4-digit code number via the **number keys**.

**Fig. 11 - 06**

- The contrast setting changes when the plus/minus keys are pressed and does not have to be confirmed with Enter. Do **not** lower the contrast setting to the extent that the display cannot be read anymore!

- Change the contrast setting as desired by pressing the **plus/minus keys**.

- Press **Enter** to exit the function.

**Summary of the function selections**

- INPUT mode

- Input menu function (number key 0)

- Program Management ....
- Create / Modify Program
- Counter ....
- Switch Functions ....
- Times ....

- Service
- Sewing Drive Functions ....
- Stepping Motor Functions ....
- Switch Outputs
- Display Inputs / Outputs
- Adjust Zero Point ....
- Configure Machine ....

- Other Functions
- Write Machine Data On Disk
- Read Machine Data From Disk
- Carry Out Cold Start
- Display Software Status
- Contrast Setting Of Display
- Change Code Number
11.05 Functions in the INPUT mode

Initial state in the INPUT mode

Fig. 11 - 07

Explanation of the symbols in the display:

Program station A (number key 1)
When this function is active, a seam program previously assigned to this program station is called up for sewing.

Program station B (number key 2)
When this function is active, a seam program previously assigned to this program station is called up for sewing.

Program number selection (number key 3)
With this function the desired seam program can be assigned to the currently active program station.
If necessary, the parts program can also be selected with this function.

Automatic program change (number key 4)
When this function is active, an automatic change between the program station A and B is carried out after the seam program has been sewn.

Vertical adjustment of frame (number key 5)
If the machine is equipped with a vertically adjustable frame (optional feature), the height of the frame can be adjusted after this function has been selected.

Bobbin thread functions (number key 6)
This function opens a menu for selecting various bobbin thread functions:

1 - RESET STITCH-COUNTER
2 - BOBBIN THREAD PRE-SELECT: 10000 STITCHES

Fig. 11 - 08

1
RESET STITCH-COUNTER
Resets the stitch-counter to "0", e.g. after an unplanned bobbin change.

2
BOBBIN-THREAD PRESELECT
Used to enter the number of stitches after which the machine automatically stops for a bobbin change.
Input mode functions

Head functions (number key 7)
Opens a menu for selecting various head functions:

1 - STANDARD STITCH LENGTH: 3.2 mm
2 - MAXIMUM SPEED: 4000 RPM
3 - REDUCED SPEED: 4000 RPM
4 - DELAY ZIGZAG ON: 3 STITCHES
5 - DELAY ZIGZAG OFF: 3 STITCHES
6 - SEWING: ON

Enter

1 2 3 4 5 6 7 8 9 0

Fig. 11 - 09

1 STANDARD STITCH LENGTH
For entering the standard stitch length of the seam program in the active program station.

2 MAXIMUM SPEED
For entering the maximum speed.

3 REDUCED SPEED
For entering the reduced speed.

4 ZIGZAG DELAY ON
For entering the number of stitches which are sewn until the command ‘Zigzag on’ is output (see Fig. 11-10).

5 ZIGZAG DELAY OFF
For entering the number of stitches which are sewn until the command ‘Zigzag off’ is output (see Fig. 11-11).

Due to the delay of the valve and cylinder, output of the commands for DELAY ZIGZAG ON and OFF must be delayed as a function of the speed.

6 SEWING
Switches the sewing operation on or off during the program cycle. When the sewing operation is switched off the pockets are stacked after the folding operation.
Folder functions (number key 8)
Opens a menu for selecting various folder functions:

<table>
<thead>
<tr>
<th>Fig. 11 - 12</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - INTERMEDIATE STOP:</td>
</tr>
<tr>
<td>2 - UNI-MATERIAL:</td>
</tr>
<tr>

</tr>
</tbody>
</table>

1. INTERMEDIATE STOP
   - 0 - off
   - 1 - 1st stop after folder down
   - 2 - 2nd stop after folding operation
   - 3 - 1st and 2nd stop
   - To continue the operation press the double start button

2. UNI-MATERIAL
   Changes the foot switch functions for working uni-materials (see chapter 7.03).

3. BASIC POSITION POCKET PLATE
   Determines the basic position of the pocket plate.

4. ALTERNATING FOLDING
   When this function is active, every second pocket is not folded.

5. ALTERNATING LABELLING
   When this function is active, only every second pocket receives a label.

6. EDGE FOLDER CONFIGURATION
   With this function enabled, different edge-folder configurations can be assigned to program stations "A" and "B".

7. CHANGE PART SET
   After the function has been selected, the part set may be changed.

**Parts program functions** (number key 9)

Opens a menu for entering values which refer to the material and size of the pieces to be worked (see chapter 9.09 Changing the part set).

The values are automatically attributed to the selected parts program (see Chapter 11.05, section: Program Number Selection).

1. **ROLLING DIRECTION STACKER**
   
   With this function, the direction in which the stacker roller is to roll slowly is determined (see Fig. 11-15).

2. **SLOW ROLLING TIME STACKER**
   
   For entering the rolling time of the slow rolling movement of the stacker roller (see Fig. 11-15).

3. **FAST ROLLING TIME STACKER**
   
   For entering the rolling time of the fast rolling movement of the stacker roller (see Fig. 11-15).

---

**Fig. 11 - 13**

<-- - - - >

1 - **ROLLING DIRECTION STACKER:** BACKWARDS
2 - SLOW ROLLING TIME STACKER: 0.50 s
3 - FAST ROLLING TIME STACKER: 0.35 s

**Enter**

---

**Fig. 11 - 15**

*stacker frame*

*workpiece*

slow rolling time, correct rolling direction

slow rolling time, change rolling direction if necessary
4. TIME FOR STACK TRESTLE BACK
   For entering the delay time between the slow rolling movement of the stacker roller and the stack trestle back.

5. TIME FOR EDGE FOLDERS BACK
   For entering the delay time for the edge folder. The time should be set in such a way that the edge folder only starts moving upwards after the folder plates have positioned in their furthest end position.

6. TIME FOR POCKET PLATE UP
   For entering the delay time between pocket plate back and pocket plate up. If the time selected is 0.00 sec., the operation for raising the pocket plate is carried out, when the end position switch for pocket plate back (E 1.2) is activated.

7. FEED SPEED
   For entering the speed of the sewing jig feed from the folding station to the sewing station.

8. SEAM CORRECTION X
   Changes the position of the seam on the pocket in the horizontal direction.

9. SEAM CORRECTION Y
   Changes the position of the seam on the pocket in the vertical direction.

0. STACKER
   With this function it is possible to choose between the standard operating sequence '0', the sequence for stacking short parts 'version 1' and stacker off '2'.
Input mode functions

Input menu (number key 0)
Opens a menu for selecting diverse functions from other menu levels:

1 - PROGRAM MANAGEMENT
2 - CREATE / MODIFY PROGRAM
3 - COUNTER
4 - SWITCH FUNCTIONS
5 - TIMES
6 - SERVICE

Fig. 11 - 16

1
PROGRAM MANAGEMENT
Opens a menu for organizing seam programs:

1 - DIRECTORY
2 - READ / WRITE PROGRAM
3 - DELETE PROGRAM
4 - FORMAT DISK
5 - STATISTICAL PROGRAM DATA
6 - DATA TRANSFER WITH PC

Fig. 11 - 17

1
DIRECTORY
Opens a menu with items for listing memory contents:

1 - DIRECTORY OF MEMORY
2 - DIRECTORY OF DISK

Fig. 11 - 18

1
DIRECTORY OF MEMORY
Displays the contents of the machine memory.

2
DIRECTORY OF DISK
Displays the contents of a disk. Program numbers valid for this machine are shown.

2
READ / WRITE PROGRAM
Opens a menu for transferring seam programs:

1 - READ ONE PROGRAM FROM DISK
2 - READ ALL PROGRAMS FROM DISK
3 - WRITE ONE PROGRAM ON DISK
4 - WRITE ALL PROGRAMS ON DISK

Fig. 11 - 19
**Input mode functions**

1. **READ ONE PROGRAM FROM DISK**
   One program to be selected is read into the machine memory from a disk.

2. **READ ALL PROGRAMS FROM DISK**
   All programs on the disk are read into the machine memory.

3. **WRITE ONE PROGRAM ON DISK**
   One program to be selected from the machine memory is written on disk.

4. **WRITE ALL PROGRAMS ON DISK**
   All programs in the machine memory are written on disk.

3. **DELETE PROGRAM**
   Opens a menu where you can delete seam programs:

   ![Menu options](image)

   1 - DELETE ONE PROGRAM IN MEMORY
   2 - DELETE ALL PROGRAMS IN MEMORY
   3 - DELETE ONE PROGRAM ON DISK
   4 - DELETE ALL PROGRAMS ON DISK

   ![Enter](image)

   Fig. 11 - 20

   1. **DELETE ONE PROGRAM IN MEMORY**
      Deletes a selected program from the machine memory.

   2. **DELETE ALL PROGRAMS IN MEMORY**
      Deletes all programs in the machine memory.

   3. **DELETE ONE PROGRAM ON DISK**
      Deletes a selected program from the disk.

   4. **DELETE ALL PROGRAMS ON DISK**
      Deletes all programs on a disk.

4. **FORMAT DISK**
   Formats a disk and names it "K3588".

   ![Warning](image)

   When you format a disk, all data on the disk are erased!

5. **STATISTICAL PROGRAM DATA**
   Displays the following program data:
   - program number
   - stitch count
   - jig code
   - stitch length
   - obstacles
   - number of bytes

6. **DATA TRANSFER WITH PC**
   With this function it is possible for the machine to communicate directly with a personal computer using the software SYS3000 or the OSCA software. For more detailed information, please see the description of the SYS3000 or OSCA. (The PFAFF 3588-14/020 can only communicate with the OSCA system).
**Input mode functions**

2 CREATE / MODIFY PROGRAM

After the function has been selected, you can create and/or modify seam programs via the control panel (see chapter 11.06 Creating / modifying seam programs).

3 COUNTER

Opens a menu for customizing the counters:

![Counter menu](image)

Fig. 11 - 21

1 RESET PIECE-COUNTER

Resets the piece-counter to "0" for the daily production.

2 THREAD MONITOR

Opens a menu which allows you to change the counters for the thread monitor:

![Thread monitor menu](image)

Fig. 11 - 22

1 SURPRESSED STITCHES NEEDLE THREAD MONITOR

Changes the number of stitches for which the needle thread monitor is not active while the workpiece is sewn on.

2 SURPRESSED STITCHES BOBBIN THREAD MONITOR

Changes the number of stitches for which the bobbin thread monitor is not active while the workpiece is sewn on.

3 STITCH REVERSAL

Changes the number of stitches which the needle automatically traces back if a needle thread disturbance occurs.

4 RESPONSE TIME, NEEDLE THREAD MONITOR

This function is for changing the sensitivity of the needle thread monitor (1 = quick response, max. sensitivity)

3 SLOW START-STITCHES

Changes the number of stitches which are to be sewn with reduced speed when sewing on a section of the workpiece.

4 CARRIAGE START (NIS)

Changes the timing for starting the motors of the sewing jig feed (° = degrees after needle bar at TDC, see Fig. 11-23).
The command for the carriage start is output when the needle pierces the material. The carriage, however, starts half a revolution later (180°), when the needle leaves the material.

⚠️ Under certain conditions, the stitch formation can be influenced by the setting.

5 START FOR THREAD TRIMMING
Changes the point in time at which the impulse to start thread trimming is sent to the thread trimming valve (° = degree after needle bar at TDC).

4 SWITCH FUNCTIONS
Opens a menu for switching machine functions on and off.

1 THREAD MONITOR
Opens a menu where you can select different thread monitors:

1 - NEEDLE THREAD MONITOR: ON
2 - BOBBIN THREAD MONITOR: ON
3 - BOBBIN THREAD SENSOR: OFF

Fig. 11 - 25
Input mode functions

1. NEEDLE THREAD MONITOR
   Switches the needle thread monitor on or off.

2. BOBBIN THREAD MONITOR
   Switches the bobbin thread monitor on or off.

3. BOBBIN THREAD SENSOR
   Switches the bobbin thread sensor on or off.

2. LANGUAGE SELECTION
   Opens a menu where you can select different languages in the display (see chapter 9.05 Selecting a language).

   LANGUAGE SELECTION:
   1: GERMAN
   2: ENGLISH
   3: FRENCH
   4: SPANISH
   5: ITALIAN
   6: POLISH
   7: TURKISH

   Fig. 11 - 26

3. OPTIONS
   Opens a menu where you can switch optional work aids on or off:

   OPTIONS:
   1: TILT HEAD:
   2: JIG MONITOR:
   3: FOLDER VERSION:
   4: LABEL FEED:
   5: JIG VERSION:

   Fig. 11 - 27

1. TILT HEAD
   (for changing the bobbin for sewing heads with a horizontal hook)
   If the machine is equipped with a tiltable head, this function serves to switch the extra on or off.

2. JIG MONITOR
   If the machine is equipped with the optional jig monitoring device, this function serves to switch the optional feature on or off.

3. FOLDER VERSION
   Lets you choose between 5 folding operations.
   - Standard
     The parts cutting is kept on the table by means of a vacuum blower while the pocket cutting is slid over the pocket plate. After the start keys have been pressed, the pocket cutting is folded and, together with the parts cutting, is transported to the sewing station.
   - Version 1
     The parts cutting is kept on the table by means of a vacuum blower. After the start keys have been pressed the workpiece is transported to the sewing station.
   - Version 2
     The parts cutting is kept on the table by means of a vacuum blower while the pocket cutting is slid over the pocket plate. After the start keys have been pressed, both cuttings are transported to the sewing station (without folding).
Input mode functions

● Version 3
The cut part is held on the table by suction air. After the start button is pressed a frame is lowered for loading the pre-folded pocket. When the start button is pressed again, both parts are transferred to the sewing station.

● Version 4
Same as "standard" version, but for folding rounded pockets.

LABEL FEED
If the machine is equipped with the optional label feed mechanism, this function serves to switch this option on or off.

JIG VERSION
For selecting one of various jig modes.

● Standard
Standard jig, that is, no flaps, no variable sewing slot.

● Flap version 1
The flap part is moved into position on the sewing jig.

● Flap version 2
The flap part is turned over into position on the sewing jig.

● Variable sewing slot
The sewing jig is equipped with a variable sewing slot.

● Cargo

CONTINUOUS CARRIAGE MOVEMENT
Lets you choose the type of carriage movement (continuous or intermittent).

LOCK / RELEASE FUNCTIONS
Releases/locks all functions in the INPUT mode, secures them with a code number or makes them accessible to authorized personnel only by means of a key.

For the table of code numbers of the individual functions please refer to chapter 14.03.01 Tables for lock/release functions.

TIMES
This function opens a menu for changing times

Fig. 11 - 27a

TIME FOR LABEL CLAMP CLOSED
With this function, the reaction time for label clamp closed can be changed.
Input mode functions

6 SERVICE

Opens a menu where you can select service functions:

Fig. 11 - 28

6 · CONFIGURE MACHINE
7 · OTHER FUNCTIONS

Fig. 11 - 29
SEWING DRIVE FUNCTIONS
Opens a menu where you can test the sewing motor:

- TURN SEWING MOTOR
- THREAD TRIMMING PROCEDURE
- CUTTING SPEED - PRE-SEL.: 200 RPM

Before performing the following functions please make sure that the needle can penetrate the needle hole without being obstructed!

1. TURN SEWING MOTOR
   Starts and stops the sewing motor. The speed can either be preselected or changed via the plus/minus keys while the motor is running.

2. THREAD TRIMMING PROCEDURE
   Starts the thread trimming procedure.

3. CUTTING SPEED - PRE-SEL.
   Pre-selects the positioning speed for thread cutting.

STEPPING MOTOR FUNCTIONS
Opens a menu where you can move the stepping motors:

- STEPPING MOTOR 1
- STEPPING MOTOR 2
- MOVE CARRIAGE
- TEST CARRIAGE

Before performing the following functions, make sure that the sewing jig feed moves without being obstructed!

1. STEPPING MOTOR 1
   Moves stepping motor 1.

2. STEPPING MOTOR 2
   Moves stepping motor 2.

3. MOVE CARRIAGE
   Moves the sewing jig feed.

4. TEST CARRIAGE
   (presently no function)
   Tests the sewing jig feed.
Input mode functions

3. SWITCH OUTPUTS
   Sets and resets outputs (see chapter 14.03.03 Tables of outputs)

4. DISPLAY INPUTS / OUTPUTS
   After this function has been selected, the states of the inputs and outputs are displayed:
   1 = Input actuated / output switched
   0 = Input not actuated / Output not switched
   Use the arrow keys to toggle between the input and output display.

   For an input and output table please refer to chapter 14.03.04 Tables of inputs.

5. ADJUST ZERO POINT
   Opens a menu where you can adjust different zero points (see chapter 8.07 Adjusting zero point):

   1 - GAUGE POSITION
   Sets the basic position of the linkage based on the carriage’s proximity switches using the zero point gauge.

   2 - NEEDLE POSITION
   Adjusts the needle’s zero point based on the gauge position. Simultaneously the machine’s zero point is also adjusted, which lies 250 mm from the needle’s zero point in the direction of the folder station.

   3 - FOLDER POSITION
   Adjusts the folder position.

6. CONFIGURE MACHINE
   Opens a menu which shows you which optional features the machine is equipped with:

   1 - TILTABLE HEAD: NO
   2 - VERTICAL HOOK: YES
   3 - JIG MONITOR: YES
   4 - LABEL FEED: NO
   5 - FLAP FEED: YES
   6 - CARGO: NO

   When commissioning the machine, or when equipping it with additional devices, the settings must be entered or changed accordingly.
OTHER FUNCTIONS

Opens a menu with various other functions:

1 - WRITE MACHINE DATA ON DISK
2 - READ MACHINE DATA FROM DISK
3 - CARRY OUT COLD START
4 - DISPLAY SOFTWARE STATUS
5 - CONTRAST SETTING OF DISPLAY
6 - CHANGE CODE NUMBER

Fig. 11 - 34

1 WRITE MACHINE DATA ON DISK
Writes the data of the machine configuration (file name: MDAT) on a disk.

For a table of all transferable machine data please refer to chapter 14.03.02 Table of machine data (MDAT).

2 READ MACHINE DATA FROM DISK
Reads machine data which are stored on a disk into the machine memory (e. g. after a cold start).

3 CARRY OUT COLD START
Carries out a cold start.
When carrying out a cold start, all settings except the zero point and the machine configuration settings are reset to boot-up values. All programs in the machine memory are deleted.

4 DISPLAY SOFTWARE STATUS
When this function is selected, the software versions of various control units are displayed.

5 CONTRAST SETTING OF DISPLAY

Do not lower the contrast setting to such an extent that the display becomes illegible!

This function lets you change the contrast setting of the display.

6 CHANGE CODE NUMBER
After a cold start, the code number is 3588. This function lets you choose your own code number between 0000 - 9999.

Functions which are secured by a code number can only be selected via the respective code.
11.06 Creating / modifying seam programs

The function CREATE / MODIFY PROGRAM allows you to modify seam programs directly on the machine via the control panel. The data set produced by this method can then also be processed by SYS3000 or OSCA (the PFAFF 3588-14/020 only communicates with OSCA).

⚠️ A newly created or modified seam program must be executed step by step on the machine to make sure that it matches the sewing jig!

11.06.01 Seam program structure

Every data record consists of three elements:

Program header
The program header contains information on the number and the length of the program, and is used for managing the programs.

Geometrical data record
A geometrical data record consists of elements (so-called sections) which can be divided into two groups:
- Sections which influence the geometry of the seam pattern
- Sections with machine functions

Stitch data record
The stitch data record is required for the sewing operation exclusively and is generated from the geometrical data record by stitch generation. It consists of coordinate pairs and machine commands, and is concluded by the end-of-program command.

11.06.02 Status bar when entering seam programs

When entering seam programs, the status bar is displayed in the first line of display:

```
X: 2500  Y: 0  1 : PROGRAM NUMBER  # 500

1 2 3 4 5 6 7 8 9 0  Enter
```

Fig. 11 - 35

The status bar structure is from left to right:
- x-axis coordinate
- y-axis coordinate
- section number together with type of section

Section parameters belonging to the section are displayed below the section type. Sections within a marked block are displayed on a dark background.
11.06.03 Summary of the functions in the initial state (entering seam programs)

The function CREATE / MODIFY PROGRAM is only accessible when the machine is in its basic position. If required, a code number must be entered, a sewing pattern inserted and a program number must be selected.

**Input menu**

1. Presser foot up/down
2. Step-by-step backwards
3. Step-by-step forwards

**Block functions**

1. MARK START OF BLOCK
2. MARK END OF BLOCK
3. MANIPULATE BLOCK
   1. SCALE UP FACTOR FOR X-AXIS
   2. SCALE UP FACTOR FOR Y-AXIS
   3. ROTATION ANGLE
   4. MIRROR
4. MOVE BLOCK
5. DELETE BLOCK

**Pattern functions**

1. MOVE PATTERN
2. MANIPULATE PATTERN
   (SYMMETRY POINT WITH TRANSFER KEYS)
   1. SCALE UP FACTOR FOR X-AXIS
   2. SCALE UP FACTOR FOR Y-AXIS
   3. ROTATION ANGLE
   4. MIRROR
3. MANIPULATE PATTERN
   (SYMMETRY POINT WITH NUMERIC KEYS)
   1. SCALE UP FACTOR FOR X-AXIS
   2. SCALE UP FACTOR FOR Y-AXIS
   3. ROTATION ANGLE
   4. MIRROR

**Additional functions**

- Reference point for coordinates
- Delete
- Change
- Activate Insert (see chapter 11.06.05)
Input mode functions

1.10.04  Explanation of the functions in the initial state (when entering seam programs)

![Figure 11-36]

**Step-by-step forwards (number key 1)**
This function allows you to trace the seam pattern step by step in a forward direction; by pressing Enter simultaneously, the entire seam pattern is traced automatically.

**Step-by-step backwards (number key 2)**
This function allows you to trace the seam pattern step by step backwards; by pressing Enter simultaneously, the entire seam pattern is traced automatically.

**Presser foot up / down (number key 3)**
Allows you to raise and lower the presser foot.

**Block functions (number key 4)**

![Figure 11-37]

1. MARK START OF BLOCK
2. MARK END OF BLOCK
3. MANIPULATE BLOCK
4. MOVE BLOCK
5. DELETE BLOCK

**MARK START OF BLOCK/MARK END OF BLOCK**
After a desired point in the program has been selected by tracing the seam pattern, the function MARK START OF BLOCK allows you to determine the start of a block. Marking the block must be completed by determining the end of the block. To do so, trace the pattern to the desired point and select the function MARK END OF BLOCK. When tracing the seam pattern, the marked block can be identified since the section number and type are displayed on a dark background.

**MANIPULATE BLOCK**
This function comprises the sub-functions SCALE UP FACTOR FOR X-AXIS, SCALE UP FACTOR FOR Y-AXIS, ROTATION ANGLE and MIRROR. The functions can be performed separately or at the same time (see Fig. 11-38).
If the ROTATION ANGLE and MIRROR functions are to be performed simultaneously, the block is first mirrored and then rotated.

For a description of the function please refer to page 11-21 MANIPULATE BLOCK. All functions are applied to the entire program.</td>
</tr>
</tbody>
</table>
**Input mode functions**

- **Reference point for coordinates** (number key 6)
  Sets the coordinates in the display to "0", thus creating a new reference point.

- **Delete** (number key 8)
  Deletes the current section.

- **Change** (number key 9)
  Allows you to modify the current section.

- **Activate Insert** (number key 0)
  Allows you to switch between the **Insert** and **Initial state** mode.
  When the function is switched off, **Initial state** is active.
Input mode functions

11.06.05 Summary of the functions in the Insert mode

The **Activate Insert** can only be selected in the initial state of entering seam programs and after the program header has been traced (see chapter 11.06.03 Summary of the functions in the initial state (entering seam programs)).

- **INS** Activate Insert

- **INS** Deactivate Insert (Switch to initial state)

**Graphical functions**

- 1 - STANDARD STITCH LENGTH
- 2 - STITCH LENGTH
- 3 - STITCH WIDTH
- 4 - CIRCLE
- 5 - ARC
- 6 - CURVE END POINT
- 7 - FLAP STOP

**Machine functions**

- 4 - SPEED
- 5 - VARIABLE SEWING SLOT
- 6 - PROGRAMMABLE OUTPUTS
  - 1 - OUTPUT 1
  - 2 - OUTPUT 2
- 7 - SEAM INTERRUPTIONS
  - 1 - PROGRAMMABLE STOP
  - 2 - WAIT FOR INPUT 1
  - 3 - WAIT FOR INPUT 2
  - 4 - WAIT FOR TIME
Input mode functions

11.06.06  Explanation of the functions in the Insert mode

Fig. 11 - 40

Block (number key 1)
Inserts a block at the current position in forward direction.

Line (number key 2)
A line (straight line) is defined as a direct link between two points. In order to enter a line the stitch length must be defined.

Single stitch (number key 3)
Enter a single stitch or feed without taking any stitch length into account. The maximum size of the single stitch or feed is 6 mm.

Curve (number key 4)
You can enter as many points of the curve as you please. The control device calculates the course of the curve, taking the stitch length into account. Curve points do not necessarily have to be needle penetration points. A stitch length must be defined. The more curve points you enter, the more precise the course of the curve will be.

Fast Slew (number key 5)
With Fast Slew the sewing jig feed can be transferred quickly. Both axes are moved to the end point independently of each other and in the quickest possible way. Therefore, the resulting path of travel is not a straight line (be careful with obstacles on the jig). If the path has to be very precise, you have to work with the Line or Curve functions without the Start Sewing function.

Graphical functions F1 (number key 6)
The function key F1 accommodates graphical functions. They are displayed in a menu where they can be selected.
STANDARD STITCH LENGTH
Determines the stitch length predominantly needed in the program. The standard stitch length is displayed in the status bar during sewing and can be changed at the stitch length control on the machine without having to go into the programming mode.

STITCH LENGTH
Determines a stitch length for a certain seam section. This stitch length is not displayed in the status bar and can only be changed in the programming mode.

STITCH WIDTH
Performs a zig-zag movement of the sewing jig feed on a base line. Here, the stitch length determines the feed along the base line from penetration point to penetration point and has to be selected accordingly. The stitch width runs perpendicular to the base line. The position of the zig-zag must be determined, too. To switch the stitch width off, enter 0.0 as width.

CIRCLE
If you wish to enter a circle, you have to determine three points. The first point is automatically the starting point. The two remaining points have to be entered. A stitch length must be defined.

ARC
For the arc, the same applies as for the circle. The last point, however, determines the end of the arc.

CURVE END POINT
Turns a curve point into a curve end point.

FLAP STOP
With this function the flap starting point is determined. The flap program will be cycled from this point on.

Start sewing (number key 7)
Starts the sewing operation. All following sections are sewn until the Thread trimming function is selected.

Thread trimming (number key 8)
Trims the thread. The Start sewing function must have been active before.

Machine functions F2 (number key 9)
This function key accommodates machine functions. They are displayed in a menu where they can be selected. All machine functions are assigned a relocation parameter with which the function can be shifted 99 stitches before or after the current position.

Fig. 11 - 43
**Input mode functions**

1. **ZIG-ZAG**
   Allows you to enter a section for which the zig-zag device at the sewing head is additionally switched on. Without having to change into the programming mode, the zig-zag can be delayed at the machine (see chapter 11.05).

2. **SECONDARY TENSION**
   Allows you to enter a section for which the secondary tension is switched on.

3. **REDUCED SPEED**
   Allows you to enter a section for which the machine sews with reduced speed. The value for the reduced speed is selected at the machine (see chapter 11.05).

4. **SPEED**
   A fixed speed is entered in the program.

5. **VARIABLE SEWING SLOT**
   The sewing slot can be set wide or narrow.

6. **PROGRAMMABLE OUTPUTS**
   Allows you to switch selectable outputs via a menu.
   - **OUTPUT 1** switches off the presser foot for jig transport without sewing.
   - **OUTPUT 2** switches the cylinder on the sewing jig for cargo pockets.

7. **SEAM INTERRUPTIONS**
   Interrupts the sewing of the program. When you select this function, a menu is displayed which lets you choose the type of interruption.
   - **PROGRAMMABLE STOP**
     A stop is programmed in the program.
     Press the **Start** function to continue the sewing operation.
   - **WAIT FOR INPUT 1**
     The sewing of the program is interrupted until the input has reached the corresponding value. For cargo pockets the deflector is switched on or off.
   - **WAIT FOR INPUT 2**
     The sewing of the program is interrupted until the input has reached the corresponding value.
   - **WAIT FOR TIME**
     The sewing of the program is stopped until the program time has elapsed.
Deactivate Insert (number key 0)
Allows you to switch between the Insert and Initial state mode.
When the function is active (i.e. displayed on a dark background), the Insert mode is active.

The CREATE / MODIFY PROGRAM function can be ended at any time by pressing the operation mode keys (INPUT/SEWING). In general, the function should be concluded with stitch generation since only complete programs, i.e. programs with a stitch data record, can be sewn. It is, however, possible to end the program without stitch generation so that faulty or uncompleted programs can be saved.
**Input mode functions**

11.06.07  Example for programming a seam

In the following, the programming of a seam is explained by means of an example. As a pattern for programming we will use a drawing with the corresponding coordinates (see Fig. 11-44).

⚠️ In order to use the seam program, the sewing jig and the corresponding part set must match.

![Diagram showing sewing jig and pattern coordinates](Fig. 11-44)

- **Select INPUT mode** (prior to the selection, the machine must be in basic position).
- **Select the Input menu function** (number key 0).
- **Select the CREATE / MODIFY PROGRAM function.**
- **If required, enter the respective code number via the number keys.**

![Input menu and number keys](Fig. 11-45)

- **Lift the sewing jig (number key 1) and insert the pattern.**
- **Lower the sewing jig (number key 1).**
- **Press Enter.**
Enter the desired program number via the number keys (e.g. 500 for a seam program to be created)

Confirm by pressing Enter.

Move step by step through the program header over the section "Obstructions" with the number keys 1 or 2, until you find the display where you can input the jig code (in this case, "obstructions" means that additional devices have been attached to the sewing jig, e.g. a variable sewing slot).

Select the Change function to change the setting for the jig code (number key 9).

Press number key 1 to switch the jig code on.

Press right arrow key to be able to enter the jig-code number. (The cursor jumps to CODE: __.)

Enter the jig-code number via the number keys (e.g. 99).

Confirm by pressing Enter.
**Input mode functions**

- **Fig. 11 - 50**
  - X: 2500 Y: 0 2 : JIG CODE
  - # 99

- **Fig. 11 - 51**
  - Select the Step-by-step forwards function (number key 1). The sewing jig now positions in the starting position.

- **Fig. 11 - 52**
  - Select the Change function (number key 9) to enter the starting position.

- **Fig. 11 - 53**
  - Move to the start point using the number keys 1 - 4.

- **Fig. 11 - 54**
  - By pressing Esc, the value of the coordinates can be reset to value which was last stored.

- **Fig. 11 - 55**
  - Confirm by pressing Enter.

- **Fig. 11 - 56**
  - Activate the Insert mode (number key 0).
● Select the **Start sewing** function (number key 7).

![Fig. 11 - 55](image)

1. Select the **Graphical functions** (number key 6).

![Fig. 11 - 56](image)

2. Select the **STANDARD STITCH LENGTH** function.

![Fig. 11 - 57](image)

3. Enter the value for the standard stitch length via the number keys (e.g. 3.40 mm)

4. Confirm by pressing Enter.

![Fig. 11 - 58](image)

5. Select the **Line** function (number key 2) to insert a straight line.

![Fig. 11 - 59](image)

6. Move to the line end point using the number keys 1 - 4.
Input mode functions

- Confirm by pressing Enter.

- Press Esc to end entering data for the straight line.

2. Move to the end point of the line.
3. Press Enter.

Fig. 11 - 73

1. Press Esc.
2. Select Machine functions.
3. Select the ZIG-ZAG function.
4. Press Enter.
Input mode functions

- Switch on **Thread trimming**.

You must perform the stitch generation in order to be able to sew with the created or modified seam program. Incomplete or faulty programs may be ended without stitch generation. However, when selecting the seam program in the **SEWING** mode, the respective error message will be displayed.

- Select **INPUT** mode to end the seam programming. (The seam program is loaded in the machine memory.)

Always execute a newly created or modified seam program step by step to make sure that it matches the sewing jig!

- After the respective program number has been entered, the created seam program can be sewn in the **SEWING** mode.

</table>

These maintenance intervals are calculated for the average running time of a single-shift operation. If the machine is operated more often, shorter intervals are recommended.
12.01 Cleaning the machine

The required cleaning cycle for the sewing machine is dependent on the following factors:

- Single or multi-shift operation
- Accumulation of dust from the various fabrics

Thus, appropriate cleaning instructions can only be determined on an individual basis for each machine.

To avoid operation disturbances, we recommend the following cleaning work for a machine in single shift operation:

- Clean the hook compartment and the needle area of the sewing head several times daily.
- Clean the entire machine at least once a week.

To do this:

- Select **SEWING** mode.
- Select **MANUAL SEWING** function (number key 0).
- Select the **change bobbin** function (number key 8).
  (Sewing head tilts up / hook compartment cover opens).
- After cleaning is finished, press the double-start keys 1 simultaneously.
  (Sewing head tilts down / hook compartment cover closes).
12.02 Cleaning the hook

- Unscrew screws 1.
- Remove hook gib 2.
- Turn handwheel until the tip of the bobbin case 3 penetrates the hook race groove by approx. 5 mm.
- Remove the bobbin case 3.
- Clean the hook race.
- Reinsert bobbin case 3.
- Screw on hook gib 2.
- Press double-start keys.

![Image of the hook cleaning process](Fig. 12-02)

12.03 Cleaning the blower air filter

- Remove cover 1.
- Take out filter element and clean with compressed air.
- Insert the clean filter element and replace cover 1.

![Image of the blower air filter cleaning process](Fig. 12-03)
12.04 Cleaning the air filter of the air filter/lubricator unit

The filter element 1 must be cleaned whenever the working pressure of 6 bar is no longer achieved.

Switch off the machine and ensure that it cannot be switched on accidentally!
Turn off compressed air!

- Unscrew drum 2.
- Remove filter element 1.
- Clean filter element 1 and drum 2 with benzine.
- Blast filter element 1 from the inside out with compressed air.
- Screw on drum 2. (Make sure that the seals are positioned properly!)

12.05 Checking / regulating air compression

The manometer 1 must indicate a pressure of 6 bar!

- Always check the air compression on the manometer 1 before operating the machine.
- When required, adjust this value by turning control 2.

When the compressed air is turned off, the water trap is emptied automatically. Place a suitable container underneath the opening.
12.06 Checking the oil level of the sewing head lubrication

- The oil level in drum 1 must be checked daily before use of the machine.
- The oil level must be between the upper and lower markings of drum 1.
- When necessary, pour oil through hole 2.

Only use oil with a mean viscosity of 22.0 mm²/s at 40°C and a density of 0.865 g/cm³ at 15°C.

- Before the machine is first operated or whenever the machine has been at a standstill for a longer period of time, also add a few drops of oil to the hook race.

We recommend PFAFF sewing machine oil, part no. 280-1-120 144.

12.07 Lubricating the needle bar frame eccentric

Switch off the machine and ensure that it cannot be switched on accidentally!
Turn off compressed air!

Only use Isoflex Topas L32, high-performance grease, part No. 280-1-120 210.

- Unscrew the cover on the reverse side of the sewing head.
- Grease eccentric 1 via grease nipple 2 using a grease gun every 2 months for single-shift operation and monthly for double-shift operation.
- Screw on cover.
Switch off the machine and ensure that it cannot be switched on accidentally!

Only use Isoflex Topas L32, high-performance grease, part No. 280-1-120 210.

- Unscrew the cover of the sewing jig feed.
- Grease the guides via grease nipple 1, 2 and 3 using a grease gun every 2 months for single-shift operation and monthly for double-shift operation.
- Screw on cover.
12.09 Lubricating the pocket plate guide

Switch off the machine and ensure that it cannot be switched on accidentally!

Only use Isoflex Topas L32, high-performance grease, part No. 280-1-120 210.

- Grease the guide at grease nipple 1 using a grease gun every two months for single-shift operation and monthly for two-shift operation.
Before beginning any adjustment work, take note of the safety regulations found in chapter 1 Safety of this instruction manual!

13.01 Notes on adjustments

All adjustments in these adjustment instructions are based on a completely assembled machine and must only be carried out by appropriately trained specialists. Covers on the machine which have to be removed for checks and adjustment work and later remounted are not mentioned. The parts in () are for securing machine parts and must be loosened before the adjustment and retightened after all adjustments are carried out.

13.02 Tools, gauges and other accessories

- 1 set of screwdrivers with blade widths from 2 to 10 mm
- 1 set of wrenches with jaw widths from 6 to 22 mm
- 1 set of Allan keys from 1.5 to 6 mm
- 1 universal screwdriver with interchangeable blades
- 1 metal ruler
- 1 adjustment pin (zero point adjustment)
- 1 adjustment gauge (for sewing head adjustments)
- 1 adjustment gauge (for adjustments to feed)
- 1 needle rise gauge, part no. 61-111 600-01
- 1 adjustable clamp, part no. 08-880 137 00
- Sewing thread and test material
- Needles

13.03 Abbreviations

TDC = top dead center
BDC = bottom dead center
Adjustment

13.04 Removing/inserting sewing head

Turn off compressed air!
Switch off main switch and ensure that it cannot be turned back on accidentally.

- To remove the sewing head, remove the protective cover 1 (screws 2).
- Remove the cover plate 3 (screws 4; 6 screws altogether)
- Unplug pneumatic power supply 5 and electrical power supply 6.
- Unhook catch 7 and fold down sewing head.
- Remove V-belt from belt pulley on motor.
- Lift sewing head and remove from its bracket.
- Remove the ground cable of the sewing head.
- To insert the sewing head, carry out the steps above in reverse.

Fig. 13 - 01
13.05 Adjusting the sewing head

13.05.01 Spacing between sewing head and bedplate

**Requirement**
When the sewing head is lowered, the distance from the lower edge of the shaft 1 to the bedplate must be **132.8 mm**.

- Check the distance between the shaft 1 and the bedplate using adjustment gauge 2.
- If required, turn plunger 3 (nut 4) according to the requirement.
Adjustment

13.05.02 Sewing head position in relation to the bedplate

Requirement
When the sewing head is lowered, after the screws 3 have been loosened, the presser bar 4 must pass exactly through the corresponding hole in the adjustment gauge 1.

- Unscrew needle plate and screw on adjustment gauge 1.
- Unscrew presser 2.
- Loosen screws 3 and guide presser bar 4 into the hole in the adjustment gauge 1.
- If required, move sewing head (screws 5) according to the requirement.
- Move presser bar 4 back to its original position and tighten screws 3 lightly.

Adjustment gauge 1 remains screwed on for further adjustments.

The precise adjustment of the presser bar 4 is described in chapter 13.05.21 Presser height.
13.05.03 Upper and lower toothed belt guards

**Requirement**
The upper and lower toothed belt guards must be positioned as close as possible over the toothed belt sprockets without touching them.

- Move the upper 1 (screw 2) and lower toothed belt guards 3 (screws 4) at the underside of the sewing head according to the requirement.

Carry out the adjustment carefully! Otherwise, when the sewing head is raised up, the toothed belt could disengage!
13.05.04 Counterweight

**Requirement**
In needle bar position BDC the largest eccentricity of the counterweight 1 must be at the top.

- Move needle bar to BDC.
- Turn counterweight 1 (screws 2) according to the requirement.
13.05.05  Preadjusting the needle height

**Requirement**
At needle bar position TDC, the distance between the needle point and the adjustment gauge must be approx. 22 mm.

- Move needle bar 1 (screws 2) without twisting it according to the requirement.
**Adjustment**

13.05.06  Zero stitch

**Requirement**
When the cylinder plunger 1 is fully extended (straight stitch position), the crank 2 must not carry out any movement when the handwheel is turned.

- Pull out cylinder plunger 1 fully.
- Turn crank 2 (screw 3) according to the **requirement**.

---

In order to better recognize the movement of the crank, insert an Allan key into screw 4.
13.05.07 Centering the needle in the needle hole

**Requirement**
When the cylinder plunger 5 is fully extended (straight stitch position), adjustment pin 1 must fit precisely into the corresponding adjustment hole of the adjustment gauge 8.

- Insert adjustment pin 1 into the needle bar and screw tight.
- Loosen screws 2, 3 and 4.
- Pull out cylinder plunger 5 until it stops.
- Move needle bar frame 6 according to the requirement.
- Turn shaft 7 according to the requirement.
- Tighten screws 2, 3 and 4.
- Unscrew adjustment gauge 8 and adjustment pin 1.
Adjustment

13.05.08  Zigzag stitch movement

Requirement
When the needle is in TDC, the needle bar 1 must not carry out any movement when the lever 4 is operated.

Fig. 13 - 09

- Bring needle bar 1 to TDC.
- Turn eccentric 2 (screw 3), without twisting it, according to the requirement.
Requirement
In straight stitch position and with the needle bar 2.4 past BDC,
1. the hook point must be at the middle of the needle; the distance between the needle and the hook point must be from 0.05 to 0.1 mm.
2. the top edge of the needle eye must be 1.0 mm below the hook point, and
3. the needle guard 4 must touch the needle lightly.

- Set the stitch length control to straight stitch position.
- Loosen the fastening screws of the bevel gear 1 and screws 2.
- Move the needle bar to BDC.
- In this position, slide the 2.4 mm thick feeler gauge of the needle bar rise gauge closely under the needle bar bearing.
- Move adjustable clamp (part no. 08-880 137 00) against feeler gauge as far as possible and screw it onto the needle bar.
- Remove the feeler gauge and turn the handwheel 3 in the direction of the arrow until the adjustable clamp is resting on the needle bar.
- Unscrew the hook gib and remove the bobbin case.
Position the hook point at the center of the needle and move the hook bearing according to requirement 1. Make sure that the needle is not pressed against by the needle guard 4.

- Tighten screws 2.
- Taking the backlash of the toothed gear into account, tighten the fastening screws of the bevel gear 1.
- If required, move the needle bar (screw 5) without twisting it according to requirement 2.
- Turn eccentric 6 (screw 7) according to requirement 3.
- Insert bobbin case and screw on hook gib.
13.05.10 Bobbin case opener stroke

**Requirement**

1. The front edges of the retaining spring 1 and the retaining trip 7 must be flush with each other.

2. When the bobbin case opener 5 is at its rear point of reversal, the distance between the bobbin case base 6 and the retaining spring 1 must be equal to the thread thickness.

- Align the retaining spring 1 (screw 2) according to requirement 2.
- Move shaft 3 (screw 4) according to requirement 1.
13.05.11 Counter presser lifting stroke

**Requirement**
At needle bar position BDC, the counter presser 3 must be positioned at its top point of reversal.

- Move needle bar to BDC.
- Turn eccentric 1 (screws 2) according to the requirement.
Counter presser height

**Requirement**
When the needle bar is at BDC, the top edge of the counter presser 6 must be 1 mm over the closed hook compartment cover 3.

- Position lever 1 (nut 2) at its lower stop (see arrow).
- Fit hook compartment cover 3 and turn bracket 4 (screw 5) according to the requirement.

If necessary, the presser lift can be increased by moving the lever 1 upwards. After adjusting the lift, the presser height should also be regulated!
13.05.13 Counter presser position

**Requirement**
In straight stitch position, when the needle penetrates, it must be centered in the needle hole of the counter presser 2.

- Pull out plunger 1 until it stops (straight stitch position).
- Adjust the counter presser 2 (screws 3) according to the requirement.
13.05.14 Zigzag stitch width

**Requirement**
At the maximum zigzag stitch width, the needle must not strike against the edge of the counter presser.

- Turn screw 1 (nut 2) according to the requirement.

By turning screw 1, the bartack width can be adjusted.
13.05.15  Resting position of the roller lever / radial position of the control cam

**Requirement**

1. When the plunger 1 is retracted, there must be a distance of 0.1 mm between the outer edge of the control cam 6 and the roller of the roller lever 5.
2. When the thread trimmer is switched on beforehand, the control cam 6 must have just brought the roller lever 5, in TDC take-up lever, to its resting position.

- Retract the plunger 1 in cylinder 2 until it stops.
- Move the cylinder carrier 3 (screws 4) according to requirement 1.
- Bring the take-up lever to BDC and push the roller lever 5 into the control cam 6 by hand.
- By turning the handwheel 7 in the direction of the arrow, bring the take-up lever to TDC and check requirement 2.
- If required, turn the control cam 6 (screws 8) according to requirement 2.

**On plunger 1, the thread should be approx. 1 mm above the lock nut 9.**
Thread catcher height

Requirement
The lower edge of the thread catcher 3 must be positioned at a distance of 0.8 mm above the bobbin case 4.

- Loosen screws 1 and 2.
- Position the thread catcher 3 above the bobbin case 4.
- Move the thread catcher 3 (screw 5) according to the requirement.
- Determine the vertical play of shaft 6, move retaining collar 7 against bearing housing 8 and tighten screw 2.

Screw 1 remains slightly unscrewed for further adjustments.
13.05.17 Thread catcher position and knife height

Requirement
When the thread trimmer is in resting position,
1. the front edges of the thread catcher 3 and the knife 5 must be flush with each other.
2. the upper edges of the thread catcher 3 and the knife 5 must be even.

- Bring the needle bar to BDC.
- Move roller lever 1 against control cam 2 by hand.
- Turn the thread catcher 3 according to requirement 1.
- Tighten screw 4.
- Check the knife height according to requirement 2.

To adjust the height, disassemble knife 5 (screws 6) and insert shim (part no. 91-141 402-05) according to the requirement.
To align the knife see chapter 13.05.18 Knife pressure.
13.05.18 Knife pressure

**Requirement**
When the point of the thread catcher 4 is 6 mm in front of the front edge of the knife 4, the cutting edge of the knife must lightly press against the thread catcher 4.

- Bring the take-up lever to BDC.
- Press the roller lever 1 into the control cam 2.
- Turn the handwheel 3 in the direction of the arrow until the thread catcher 4 is approx. 4 mm in front of the knife 4.
- Move the knife 5 (screws 6) according to the requirement.
- Check requirement 1 from chapter 13.05.17 Thread catcher position and knife height.
**Adjustment**

13.05.19 Bobbin thread clamp spring

**Requirement**
The clamp spring 1 must
1. not be pressed down during the movement of the thread catcher.
2. clamp the bobbin thread reliably after it is cut
3. not obstruct insertion and removal of the bobbin case.

![Diagram](image_url)

- Bring the thread trimmer to resting position.
- Move the clamp spring 1 (screws 2) so that the clamp lips are as close as possible to the inside wall and to the front edge of the thread catcher 3.
- Adjust the height by bending the clamp spring 1 so that between the upper side of clamp spring 1 and the lower side of the thread catcher 3 there is a distance of approx. 0.1 mm.
13.05.20 Manual cutting test

**Requirement**
1. When it is moving forward, the thread catcher 1 must not push along the bobbin thread 3 in front of it.
2. At the front point of reversal of the thread catcher 1, the bobbin thread 3 must lie approx. 2 mm behind the lug of the thread catcher 1.
3. At the end of the cutting operation, the needle and bobbin threads must be cut perfectly. The bobbin thread 3 must be clamped.

- Carry out the cutting operation manually.
- Check requirement 1. If necessary, readjust the thread catcher 1 according to chapter 13.05.16 Thread catcher height.
- Check requirement 2. If necessary, readjust the thread catcher 1 according to chapter 13.05.17 Thread catcher position and knife height.
- Check requirement 3. If necessary, readjust the bobbin thread clamp spring 2 according to chapter 13.05.19 Bobbin thread clamp spring.
Adjustment

13.05.21  Presser height

Requirement
1. When the take-up lever is at TDC, the needle point must not extend under the presser 1 when the presser 1 is raised.
2. The presser 1 must be aligned laterally so that the sewing thread is blown out from under the presser 1 when the sewing jig is moved into position.

- Screw on presser 1.
- Bring the take-up lever 2 to TDC.
- Move the presser bar 3 (screws 4) according to requirement 1 and/or turn according to requirement 2.
13.05.22 Bobbin winder

**Requirement**

1. When the bobbin winder is switched on, the bobbin winder spindle must move securely with the winder.

2. When the bobbin winder is switched off, friction wheel 5 must not be driven by drive wheel 1.

3. The bobbin winder must switch off automatically when the bobbin has been filled approx. 1 mm from the edge.

- Move drive wheel 1 (screws 2) according to requirements 1 and 2.
- Move pin 3 (screw 4) according to requirement 3.
Requirement
For the tension release, the distance between the tension disks must be 0.5 mm.

- Turn screw 1 (nut 2) according to the requirement.
13.05.24  Thread check spring and slack thread regulator

**Requirement**
1. The stroke of thread check spring 7 must be completed when the needle point penetrates the material (travel of the spring approx. 7 mm).
2. When the thread loop is at its largest when going round the hook, the thread check spring 7 must be lifted slightly above support 1.

![Diagram of sewing machine parts](image)

- Position rest 1 (screw 2) according to Requirement 1.
- To adjust the spring tension, turn screw 3 (screw 4).
- Position thread regulator 5 (screw 6) according to Requirement 2.

For technical reasons, it may be necessary to deviate from the travel of the spring and/or the spring tension indicated here.
Adjustment

13.05.25 Sewing head lifting cylinder

Requirement
The up and down movement of the sewing head must be uniform.

- Insert the sewing head and connect. (See chapter 13.04 Removing/inserting sewing head).
- Adjust the speed (screw 1) and shock absorbing action (screw 2) of the upwards movement of the sewing head, and the speed (screw 3) and shock absorbing action (screw 4) of the downwards movement of the sewing head according to the requirement.

The pressure for the downward movement can be regulated with screw 5 (standard setting 4.5 bar).

When adjusting the shock absorbing action, make sure that the cylinder 6 moves as far as it can go especially for the downward movement of the sewing head!
**Requirement**
After the sewing operation has been completed, the machine is to position at TDC of the take-up lever.

- Allow sewing machine to carry out positioning (switch on/off).
- Loosen screws 1.
- Hold synchronizer 2 firmly and bring take-up lever 3 to TDC by turning the handwheel 4.
- Tighten screws 1.

After positioning is completed and the presser foot is raised, the needle must not extend underneath the presser foot.
Adjustment

13.05.27 Hook lubrication

Requirement
When the machine is running, after approx. 10 seconds a fine line of oil must form on a paper strip 4 held next to the hook.

- Cover sensor 1 with metal ruler.
- Turn on machine.
- Select INPUT mode.
- Select Input menu function (number key 0).
- Select SERVICE function.
- Select SEWING DRIVE FUNCTIONS function.
Adjustment

1. Select TURN SEWING MOTOR function.
2. Set the speed to 4000 min⁻¹ using the number keys.

⚠️ When the sewing motor is running, do not reach into the needle area! Danger of injury by the moving parts!

Enter

1. Confirm input with the Enter key.

2. Select the start function.
3. Allow the sewing motor to run for 2-3 min.
4. While the motor is running, hold a paper strip 4 next to the hook and check the requirement.
5. If necessary, adjust the oil supply with screw 2.
6. Switch the machine off and screw on the hook compartment cover.

⚠️ The wick used for lubricating the front parts must always be impregnated with oil. However, oil must not drip onto the bedplate!

1. If necessary, adjust the amount of oil with screw 3.
13.06 Adjusting the folding, feed and stacker devices

13.06.01 Aligning the sewing jig

**Requirement**
The lowered sewing jig must lie evenly and lightly on the table top at both the folding and the sewing stations, and hold the workpiece securely.

- Loosen screws 1 on both sides of the machine.
- Align the sewing jig by turning screws 2 (nuts 3) on both sides of the machine so that it is parallel to the table top in the x-direction.
- Tighten screws 1.
- Align the sewing jig by moving the carrier 4 (screws 5 on both sides of the machine) so that it is parallel to the table top in the y-direction.
13.06.02 Height of the pocket plate guide

**Requirement**
The lowered pocket plate must be parallel to the top edge of the table.

- Check the **requirement** using a metal ruler.
- Loosen screws 1 and 2.
- Adjust the height of the guide 3 with screw 4 (nut 5) according to the **requirement**.
- Turn the plunger (lock nut) of cylinder 6 until the guide 3 is parallel to the table top.
- Tighten screws 1 and 2.
Adjustment

13.06.03 Aligning the pocket plate arm

Requirement
When the pocket plate is lowered, it must lie evenly on the table.

- Loosen screws 1.
- Turn screws 2 (nuts 3) according to the requirement.
- Tighten screws 1.
13.06.04 Aligning the pocket plate guide

**Requirement**
Guide 7 must be positioned perpendicular to guide 8 of the sewing jig feed.

- Select the **Sewing** mode.
- Machine moves to basic position.
- Remove pocket plate and insert pocket plate gauge 1.
- Select **INPUT** mode.
- Select the FOLDER POSITION function from the service menu (see chapter 11.03 Summary of the service functions).
- Check the **requirement** using adjustment pin 2.
- Turn off compressed air.
Adjustment

- Slide pocket plate gauge 1 to the back and mark front position.
- Loosen screws 3 and 4.
- Turn screw 5 (nut 6) according to the requirement.
13.06.05 Front pocket plate position

**Requirement**
When the folder is positioned at zero point, the adjustment holes of the pocket plate and the sewing jig must be aligned.

- Switch on the machine.
- Select the INPUT mode.
- Select the FOLDER POSITION function from the service menu (see chapter 11.03 Summary of the service functions).
- Set the value for the y-axis to ‘0’.
- Check the requirement using the adjustment pin 1.
- Change the value for the x-axis according to the requirement via the control panel and store.
- Move the pocket plate arm 2 (screws 3) according to the requirement.

The machine remains switched on for further adjustments.
Adjustment

13.06.06 Monitoring the sewing jig feed

Requirement
1. In the y-direction, the sewing jig 5 must not be able to move from its zero point more than 5 mm toward the bottom and 260 mm to the top.
2. The proximity switch 3 must be 0.2 mm below the switch vane 1.

Fig. 13 - 34

- Move the switch vane 1 (screws 2) according to requirement 1.
- Move the proximity switch 3 (screw 4) according to requirement 2.
13.06.07 Positioning the edge folding unit

**Requirement**
When the edge folding unit and pocket plate are lowered
1. Folder arm 4 must be parallel with pocket plate arm 3 and the table top.
2. The pins in folder arm 4 and the bushes 2 in pocket plate gauge 1 must be aligned, and
3. there must be a clearance of 19 mm between folder arm 4 and pocket plate gauge.
4. The folder arm must rest lightly on the table top and hold the workpiece securely.

- Remove pocket plate and edge folder
- Insert pocket plate gauge 1 and bushes 2.
- Call up the SEWING mode.
- Switch on the manual sewing function (number key 0).
- Press the double start buttons.
- Operate the cycle forwards function until pocket plate arm 3 and folder arm 4 are lowered.
Adjustment

- Loosen screws 5.
- Position folder arm 4 by turning and pushing it and by turning screws 6 according to requirements 1 and 2.
- Tighten screws 5 securely.
- Turn shock absorber 7 (nut 8) according to requirement 3.
- Remove pocket plate gauge 1 and fit the folding unit.
- Apply Tesamoll (adhesive tape) to the edge folder frame to fulfil requirement 4.
### Adjustment

13.06.08 Aligning the die

**Requirement**
When the folder is lowered and the pocket plate is raised at the same time,
1. the bottom edges of the die’s strips must be at a distance of approx. the thickness of the fabric under the underside of the pocket plate.
2. and they must be positioned on all sides at the same distance of 0.3 to 1 mm (depending on the fabric) to the pocket plate edges.

- Align the bottom edges of the die’s strips with the underside of the pocket plate via screws 2 (nuts 3).
- Turn damper 9 (nut 10) - see Fig. 13-35a - according to requirement 1.
- Align die 1 (screws 4) according to requirement 2.
13.06.09 Control sequence of the folder plates

<table>
<thead>
<tr>
<th>Pocket style</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Switching position</td>

<td>f</td>
<td>e</td>
</tr>
<tr>
<td>4. Switching position</td>
<td>f + g</td>
<td>g + h</td>
<td>f</td>
<td>g</td>
<td>f + g</td>
</tr>
</tbody>
</table>

The control sequence and the number of folder plates (and the number of switching positions) depends on the pocket style. The folder installation shown in Fig. 13-37 is for the third pocket style. For other pocket styles, refer to the above table for the cylinders corresponding to the relevant switching positions.
13.06.10 Position of folder plates

**Requirement**
1. The front edges of the folder plates 1 must be parallel to the die 4.
2. In the initial position, the folder plates 1 must be positioned on all sides approx. 0.1 mm under the lower edges of the strips of the die 4.

- Remove the folder.
- Align folder plate 1 (screws 2) according to requirement 1.
- Insert the folder plates 1 one after another according to the control sequence (see chapter 13.06.09 Control sequence of the folder plates) and align according to requirement 2 (screws 3).
- Remount the folder.
13.06.11 Position of corner folders

**Requirement**

1. In folder position, the corner folders 4 must be parallel under the slanted side of the folder plate and overlap by 1 to 2 mm.
2. The corner folders 4 must be positioned 1 to 2 mm under the folder plates depending on the fabric thickness.

- Preadjust the clamps 1 (screws 2) according to requirement 1.
- For the final adjustment, turn stop screws 3 according to requirement 1.
- Adjust the corner folders 4 (screws 5) according to requirement 2.
13.06.12  Aligning the seam in relation to the pocket

**Requirement**
The seam is to be at the same distance on all sides to the pocket edge.

- Switch on the machine.
- Select the **INPUT** mode.
- Select parts program functions function (number key 9).
- Align the seam according to the requirement via the functions SEAM CORRECTION X (number key 7) and SEAM CORRECTION Y (number key 8).
- Store the changes with the Enter key.
- Switch off the machine.
Adjustment

13.06.13  Seam backtack distance

Requirement
The distance between the seam backtack and the pocket opening is to be approx. 1 mm.

- Adjust stops 1 (screws 2) on the pocket plate according to the requirement.
13.06.14 Stacking device

**Requirement**
When it is in operating position, the stacking device 2 must hold the workpiece with the least amount of pressure possible.

- Adjust the pressure at pressure reducing valve 1 according to the requirement.

To carry out the adjustments, the outputs Y 52 and Y 51 must be switched. (See SERVICE FUNCTIONS, page 11-17).
13.06.15  Aligning the feed rollers

**Requirement**
The lowered feed rollers 4 must rest lightly and evenly on the table top, and be positioned parallel to the front edge of the table.

- Turn screws 1 (loosen screws 2 slightly) and the plunger of the cylinder 3 according to the requirement.
13.07 Shaping folder plates

13.07.01 New installation / self-manufacture of folder plates

- Make and/or install the folder plates according to Fig. 13-44.

When newly installing or making the folder plates, make sure that they lie behind the corners of the pocket plate by at least the amount of the fabric thickness on the marked spots.

For the fifth pocket style, the folder plates e, f and g must be additionally slanted by 30°.
Adjustment

13.07.02 Slanting the lateral folder plates

Do not begin with this work process until the adjustments in chapters 13.06.12 Aligning the seam in relation to the pocket and 13.06.13 Seam backtack distance have been carried out!

- With the folder plates fully extended, transfer the front edges of the stops 1 and the outer edge of the pocket plate 2 to the lateral folder plate.
- Trace slanted edge of 30°.
- Work the folder plate up to 1 - 2 mm before the trace.
- Round off the edges of the folder plate and polish.

Fig. 13 - 45
14 Control

14.01 Basic setting / Diagnosis / Pin assignment

14.01.01 Basic control unit A20

In the factory, the basic control unit is equipped with the necessary operating and ramp software. This may only be replaced by appropriately trained personnel.

Pin locations
Operation indicators/Voltage supply
LEDs for various operating voltages are provided on top of the device (see sticker on the device).
These LEDs are for +12V, +15.1V and +24V.

Fuses
2,0 AT / 5V / CPU
6,3 AT / 24V / Periphery
0,5 AT / 16V / Control panel
1,25 AT / 230V / Main

14.01.02 Sewing drive A22

! IMPORTANT
Before leaving the factory, the sewing drive controller is equipped with the necessary operating software. This software may only be replaced by appropriate specialist personnel.

The LED Power on indicates if (the sewing drive) is ready to operate. There are no diagnostic functions and fuses available. If error messages occur in the machine display, please refer to chapter 14.02.02 Errors - Sewing drive.

14.02 Error description

If an error occurs at the machine, the current operation is interrupted and an error message is displayed. Depending on the gravity of the error displayed, an error-free operation can be achieved by adjusting, checking, different handling etc. If necessary, individual components must be replaced. For many of the error messages, the cause which led to the error is also displayed and will be helpful for error correction (see chapter 14.02.01 Example of an error message).

14.02.01 Example of an error message

In the following, an error when switching an output is displayed.

If an error occurs when switching an output, the respective output is displayed with the desired switching state (0) or (1), (0) meaning that the output is to be switched off and (1) meaning that the output is to be switched on. The next line displays the cause which led to the mistake. In brackets the set condition for an error-free operation is displayed. In our example, the input E2.2 is thus not meant to be switched.
If an error occurs during an operation with the sewing motor, the operation is canceled and an error message is displayed. The error message is generated by the motor controller and appears on the display of the control panel; the index number is hexadecimal.

## Errors - Stepping motor drive

If problems occur with the stepping motor drive during the operation, an error might have occurred in the stepping motor controller. The error message is indicated by LEDs on the stepping motor controller.

<table>
<thead>
<tr>
<th>LED</th>
<th>Meaning</th>
</tr>
</thead>
</table>
| 01 ROT. ERROR | goes out when  
- the motor blocks  
- the stepping motor amplifier is not ready  
- the Enable input is not activated  
- a breakage has occurred in the supply and/or blocking detection line |
| 06 READY | is lit when  
- the amplifier is driven correctly  
- the supplied voltage is in the rated range |
| 07 FAULT | lights up if a short-circuit occurs between two motor phases |
| 08 TEMP  | lights up if the temperature at the cooling device is too high (> 75 °C) |
| 09 OVER-VOLT | lights up if there is an over-voltage ( >400 V) during braking |
| 10 LOW-VOLT | lights up if there is a low voltage ( <200 V) |
| 09 + 10  | are lit if the Enable input is not activated |
# Control

## Additional problems

<table>
<thead>
<tr>
<th>Problem</th>

<td>choose the correct phase current</td>
</tr>
</tbody>
</table>
14.02.04 Errors - Stacker drive

If problems occur with the stacker drive during operation, an error might have occurred in the motor drive.
In this case, a flashing LED on the motor controller indicates the error.

<table>
<thead>
<tr>
<th>H1(yellow) flashes</th>
<th>Condition/cause</th>
<th>Correction/Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>once</td>

</table>
14.02.06  Errors - Disk drive

If an error at the disk drive occurs during an operation, the operation is canceled and an error message is displayed. The error message is given out by the disk drive. Some errors are displayed in clear text, others are given in number form (decimal).

<table>
<thead>
<tr>
<th>Number</th>

</tbody>
</table>
**Errors - Stitch generation**

If an error occurs during the calculation of the stitch data, the operation is canceled and an error message will be displayed. The error message appears in clear text and possibly with a number in brackets. This number indicates the section where the error occurred. Additionally, errors may occur which have not been assigned a special text. Please refer to the following table for the meaning of the error number.

<table>
<thead>

14.03.02 Table of machine data (MDAT)

The following input functions are stored:

- program station A
- program station B
- parts program number
- automatic program change

Bobbin thread functions: bobbin thread pre-select

Head functions: maximum speed
- reduced speed
- delay zigzag on
- delay zigzag off
- sewing

Folder functions: intermediate stop
- uni-material
- basic position pocket plate
- alternating folding
- alternating labelling
- Edge folder configuration

Parts program functions: rolling direction stacker
- slow rolling time stacker
- fast rolling time stacker
- Time for stack trestle back
- time for edge folders back
- time for pocket plate up
- feed speed
- seam correction X
- seam correction Y
- Stacker

Counter: surpressed stitches needle thread monitor
- surpressed stitches bobbin thread monitor
- stitch reversal
- Response time, needle-thread monitor
- slow start-stitches
- carriage start (NIS)
- start for thread trimming

Switch functions: needle thread monitor
- bobbin thread monitor
- bobbin thread sensor
- language selection
- tilt head (bedplate)
- jig monitor
- folder version
- label feed
- Jig version
- flap
- continuous carriage movement
- lock/release functions

Times: Time for label clamp closed

14.04 Updating the software

- Switch off the on/off switch.
- Insert the disk with the new software (bootdisk "K3588Boot1" – machine software) in the disk drive.
- Remove the switch cabinet cover.

⚠️ Only have this work carried out by properly trained personnel! Do not touch any live parts! Danger from electric voltage!

- Press key 1 (accessible through hole) and hold it in this position.
- Switch on the on/off switch.

- With Enter all seam patterns are deleted and the boot program continued.
- To interrupt the boot program press another key.
Control

- SAVE KONFIGURATION WITH ENTER
- SKIP WITH ANY OTHER
YOU SHOULD NOT SAVE KONFIGURATION IF YOU ARE BOOTING THIS BS3-UNIT ON THIS MACHINE FOR THE FIRST TIME!

Press **Enter** to save the configuration data and continue the booting procedure (e.g. for a software update).
Press any other key on the control panel to delete the configuration data (e.g. when replacing a BS3).

- **Boot program is running..**
  - please wait.
- **The boot data is displayed.**

- Remove the disk from the disk drive and restart the machine.

- **If this display appears on the screen after the restart, insert BOOTDISK "K3588BOOT2" – BS3-firmware in the disk drive and confirm with Enter.**
