Instruction manual

For adjustment of the sewing machine use service manual Pfaff 1493 E.
Notes on safety

● The machine must only be commissioned in full knowledge of the instruction manual and operated by persons with appropriate training.

● Before putting into service also read the safety notes and the instruction manual of the motor supplier.

● The machine must be used only for the purpose intended. Use of the machine without the safety devices belonging to it is not permitted.

● When gauge parts are exchanged (e.g. needle, presser foot, needle plate, feed dog and bobbin) during threading, when the workplace is left, and during service work, the machine must be isolated from the mains by switching off the main switch or disconnecting the mains plug.

● On mechanically operated clutch motors without start inhibitor it is necessary to wait until the motor has stopped.

● General servicing work must be carried out only by appropriately trained persons.

● Repairs, conversion and special maintenance work must only be carried out by technicians or persons with appropriate training.

● For service or repair work on pneumatic systems the machine must be isolated from the compressed air supply system. Exceptions to this are only adjustments and function checks made by appropriately trained technicians.

● Work on the electrical equipment must be carried out only by electricians or appropriately trained persons.

● Work on parts and systems under electric current is not permitted, except as specified in regulations EN50110.

● Conversions or changes to the machine must be made only on adherence to all safety regulations.

● For repairs, only replacement parts approved by us must be used.

● Commissioning of the sewing head is prohibited until such time as the entire sewing unit is found to comply with EC regulations.

Meanings of the symbols:

⚠️ Danger spot!

⚠️ Items requiring special attention.

⚠️ Danger of injury to operative service staff.

Be sure to observe and adhere to these notes!

Subject to technical modifications

Status 11.93

PFAFF 3
Starting up

● Before the machine is put into operation for the first time, clean it thoroughly and oil it (see page 8).

● Check whether the belt guard is mounted (see page 7).

● Before the machine is switched on, connect compressed air and check air filter/lubricator (see page 8).

● Ask a technician to check if the motor may be operated with the available mains voltage and if it is properly connected in the junction box. Never operate the machine if this is not the case.

● The encoder adjustment must only be carried out by persons with appropriate training (see page 6).

● The maximum sewing speed is 3200 s.p.m.
Encoder adjustment

⚠️ This work should only be carried out by a qualified technician.

1 Preliminary work
- Plug the 6 channel plug of the encoder into the motor control box.
- Turn master switch on.

2 Setting
The settings on the input panel are as follow:

press ⬇️-LED off.

INPUT appears in the display

press 6

SERVICE

press 2

PARAMETER 618

press + - until display is at 700.

PARAMETER 700

press Enter

Turn the hand wheel slowly in the direction of rotation (at least one turn!) until the point of the needle is directly above the needle hole.

press Enter

Switch to sewing mode.

press ⬇️-LED on.

Operate pedal. The reference position (parameter 700) and the positions needle bottom dead centre (b.d.c) (702) and needle top dead centre (t.d.c.) (703) have now been set.

Further parameter settings can be carried out in the main menu " 6 SERVICE ", sub function " 2 SEW. MOTOR " as described above (see also "Menu functions - overview" page 19).
The following parameters of the part function "SEWING MOTOR" are possible

- Parameter 618, reverse on/off.
- Parameter 700, reference position of the needle with automatic generation of the needle position down (parameter 702) and needle position up (parameter 703).
- Parameter 702, needle position down.
- Parameter 703, needle position up.
- Parameter 718, after-brake of the sewing drive.
- Parameter 722, acceleration ramp of the sewing drive.
- Parameter 723, brake ramp of the sewing drive.
- Parameter 800, direction of rotation of the sewing drive.
- Parameter 801, reverse rotation angle.

![Diagram of belt guard]

**Belt guard**

- Switch off the machine.

**Above the table top**

Slide the left and right hand part of the guard with their slots behind the heads or rubber washers of the retaining screws 1. Attach spacer 2 onto the retaining screw 3 and screw into the threaded hole 4. Making sure that the lug 5 is behind the slot 6 and in front of the spacer 2, adjust the belt guard and tighten up screw 3. Finally tighten up the screws 1 in the holes 7.

**Beneath the table top**

Adjust the belt guard so that both the motor disk and the V belt run free and tighten up in this position.

![Warning]

Do not operate the machine without the belt guard. Danger of accident!
Oiling

Switch off the machine.

Put a few drops of oil in hole 1 of the oil reservoir each day.
Put 1 to 2 drops of oil in the hole 2 of the hook gib each day.

Please note! Only use oil with a mean viscosity of 22.0 mm²/sec. at 40°C and a density of 0.865 g/m³ at 15°C.
Pfaff sewing machine oil no. 280-1-120 144.

Greasing the bevel gears

The bevel gears of the hook drive must be freshly greased once a year.
Tilt the machine over backwards and apply a little grease to the tooth flanks.
We recommend sodium grease with a drip-point of about 150°C (part no. 280-1-120 243).
Lift the sewing head up with both hands. Risk of crushing between the sewing head and table top.

Air filter/lubricator

The pressure gauge must show a pressure of 6 bar. If necessary have pressure set correctly.
Care

Switch off the machine.

Clean the hook and surrounding area each day - more often when in continuous use.

Raising and disengaging the roller presser

Raise the hand lever at the back of the needle head. Pull roller presser 1 lightly down and disengage it to the left.
Inserting the needle

⚠️ Switch off the machine.

- Only use needle system 134-35.
- Raise and disengage roller presser (see page 9).
- Loosen needle retaining screw 1 and push needle right in (the long groove must face to the left).
- Tighten needle retaining screw 1 and re-engage the roller presser.

Winding the bobbin thread

- Thread the bobbin thread as shown in fig. 8.
- Thread tension (knurled screw 1).
Changing the bobbin and threading the bobbin thread

⚠️ Switch off the machine.

Open the bed cap, lift retainer 1, remove bobbin case and thread as shown in fig. 9. Insert bobbin case, return retainer 1 and close bed cap.
Threading the needle thread

⚠️ Switch off the machine.

Thread the needle thread as shown in fig. 10.

⚠️ Do not operate machine without the take-up lever guard 1.
Danger of injury!
Regulating the needle thread tension

Fig. 19
Application of PFAFF 3834-3/11

Single needle lockstitch post-bed high-speed seamer (post to the right of the needle) with wheel feed and roller presser for insertion of pre-gathered and not pre-gathered sleeves.

Specification PFAFF 3834-3/11

Stitch type: 301 (Lock stitch)
Model: A
Hand wheel eff. diameter: 65 mm
Needle system: 134-35 R
Workspace width: 245 mm
Workspace height: 115 mm
Fabric clearance: 9 mm
Post height: 180 mm
Bed plate dimensions: 518 x 177 mm
Maximum speed: 3200 s.p.m.*

Workplace-related noise level at a speed of 2700 s.p.m.: $L_{WA} = 80$ dB (A)
Noise measurement according to DIN 45635-48-A-1

Net weight (head only): about 61 kg
Gross weight: about 71 kg

*depending on stitch length

Subject to modifications in design, weight and dimensions.
Program number display (R = right-hand sleeve, L = left-hand sleeve, K = Knee switch for programs 1 and 2)

Difference in roller presser motion

Selected size

Fig. 20
Functions of keys on the control panel

1 = Size selection (only possible in programs 3 to 24 with knee switch switched off).*
2 = To switch between right and left hand sleeve (only possible in programs 3 to 24 and when program is set at sewing segment 1).
3 = To interrupt programmed sewing* (e.g. in order to trim the sewing threads in case of thread breakage, possible in programs 1 to 24, see also pages 34 and 36).
4 = Thread trimmer ON*/OFF
5 = Direct input of roller presser feed motion (only possible in program 0)
6 = Direct input of wheel feed (only possible in program 0)
7 = To select a program number
8 = To select INPUT* or SEWING mode
9 = To verify the inputted program data
10 = ESC key
   When actuated within menu, the program goes to the next higher level; when programming, it moves one step back.
11 = To verify an error message and continue input.
12 = To recall default state or to cancel values when inputting numbers (only in INPUT mode).
13 = a) To increase roller presser feed motion by steps of 0.1 mm when program number 0 is selected.
   = b) To select the following sewing segment when program interruption is selected (LED on key is on).
   = c) To browse forwards in menu when INPUT mode is selected (LED on key is on).
   = d) To increase roller presser feed motion by steps of 0.1 mm for all segments of a program when program number 1 to 24 is selected and control is at program start.
14 = a) To decrease roller presser feed motion in steps of 0.1 mm when program number 0 is selected.
   = b) To select previous sewing segment when program interruption is selected (LED on key is on).
   = c) To browse backwards in menu when INPUT mode is selected (LED on key is on).
   = d) To decrease roller presser feed motion in steps of 0.1 mm for all segments of a program when program number 1 to 24 is selected and control is at program start.
15 = Dialog display
16 = Display for roller presser feed motion
17 = Display for wheel feed

Functions of keys on machine head

18 = To interrupt programmed sewing* (e.g. in order to trim the sewing threads in case of thread breakage, possible in programs 1 to 24, also see pages 34 and 36).
   Upper LED lights up when function is selected; lower LED lights briefly up when control switches to the next sewing segment
19 = To decrease roller presser feed motion by steps of 0.1 mm for one segment of a program when program number 1 to 24 is selected and the control is at the desired program segment. All other functions same as key 13 item a to c.
20 = To increase roller presser feed motion by steps of 0.1 mm for one segment of a program when program number 1 to 24 is selected and the control is at the desired program segment. All other functions same as key 14 item a to c.

Programming - input

With regard to the operation of the machine a distinction is made between “sewing” and “input”. Input is divided into functions for direct selection and functions selected from the menu.

Functions for direct selection
Functions for direct selection can be selected with the keys illustrated below.

- Thread trim ON/OFF

- Increase roller presser feed motion by steps of 0.1 mm if program number 0 is selected.
- Increase roller presser feed motion by steps of 0.1 mm for all segments of a program if program number 1 to 24 is selected and control is at program start.
- Increase roller presser feed motion by steps of 0.1 mm for individual segments of a program (only via key on machine head).

- Decrease roller presser feed motion by steps of 0.1 mm if program number 0 is selected.
- Decrease roller presser feed motion by steps of 0.1 mm for all segments of a program if program number 1 to 24 is selected and control is at program start.
- Decrease roller presser feed motion by steps of 0.1 mm for individual segments of a program (only via key on machine head).

Functions selected with the menu
(also see menu functions - overview page 19)

Other functions can be selected with menus. To recall the menu, select “input” mode.

Press INPUTS appears in the display.

By operating keys (to browse forwards) or (to browse backwards) you move on the main functions level. By means of the numeric keys the main functions can also be selected directly.

Press to verify a selected function and to start the input or to select a sub-function.

If is pressed you return to the previous function. If is pressed you return to the default state of the input.
Main functions

1 - Programming
2 - Memory card
3 - Switch functions
4 - Counter
5 - Speeds
6 - Service

1. Programming
Under the main function “Programming” the programs for programmed seams are inputted (for programming options see page 25).

2. Memory card (optional)
Functions:
- To save programs
- To transfer programs from one machine to another

For sub-functions see menu functions - overview page 19.

3. Switch functions
Function “knee switch ON/OFF” is selected with sub-function KNEE SWITCH. If “ON” is selected, all freely programmable programs (program number 3 to 24) will be converted for knee switch. If “OFF” is selected, all freely programmable programs (program number 3 to 24) are converted for grading.

Via sub-function LANGUAGES the language for the dialog in the display is determined.

4. Counter
With sub-function SLOW START STITCHES the number of stitches is inputted that will be performed at a reduced speed in sewing mode.
With sub-function PEDAL PARAMETERS the degree of pedal delay (0 = little delay, 9 = large delay) is inputted.

5. Speeds
With the sub-functions it is possible to input the maximum speed and the speed for the slow start stitches.

6. Service
With this main function the user can check some of the hardware functions and the control. In addition, he can carry out some settings on the sewing drive.
Programming options

The following programs/sewing procedures are possible:

Program 0 = Manual sewing

Program 1 = Sewing with two different seam segments

Program 2 = Sewing with three different seam segments

Note: Programs 1 and 2 are fixed programs. The seam segments (different roller presser feed motions) are incremented by operating the knee switch and repeated until the treadle is actuated to the 2nd backwards position. The knee switch is automatically enabled.

Program 3 to 24 = Freely programmable with up to 15 seam segments each for right and left hand sleeve. In the segment display an R indicates the right hand sleeve and an L the left hand sleeve. In addition the current segment (1 to 15) is indicated. The programs can be programmed so that it is possible to increment the sewing segments either via the knee switch (knee switch must be enabled) or via measurement of seam length (seam lengths are learned, knee switch must be disabled). Grading, however, is only possible when incrementing via measurement of seam length.

In order to be able to input programs you have to be in “IN PUT” mode (press key).

Program 0 (manual sewing)

With display, say,

3 R1 0 50

PROGRAM NO. 3

or 0 + Enter

MANUAL

Changing the stitch length (e.g. to 2.5 mm)

STITCH LENGTH

2 and 5

STITCH LENGTH 2.5

Enter

MANUAL 2.5

Changing the roller presser feed motion (e.g. to 2.8 mm)

FEED ROLL. PR.

2 and 8

FEED ROLL. PR. 2.8

Enter

MANUAL 2.8 2.5

The stitch length and the roller presser feed motion can also be changed together. To this end press both key and key.

STITCH LENGTH

2 and 5

STITCH LENGTH 2.5 2.5

Enter

MANUAL 2.5 2.5
Programming procedure program 1

Sewing two sewing segments with two different roller presser feed motions. Incrementing the sewing segments via knee switch.

Example:
Stitch length 2.5 mm
Roller presser feed motion 1st sewing segment - 2.6 mm
Roller presser feed motion 2nd sewing segment - 2.8 mm

The machine is back to “sewing” mode. By operating the knee switch it is possible to alternate between the two sewing segments.

K1 = knee switch segment 1
K2 = knee switch segment 2

Programming procedure program 2

Sewing of three seam segments with three different roller presser feed motions. Programming sequence same as in program 1.
Programming procedure of programs 3 to 24

Programs 3 to 24 are freely programmable with up to 15 seam segments each for the right and left hand sleeve.

There are two possibilities of incrementing the seam segments:

1. Via knee switch (knee switch must be enabled)
   The operator sews the seam segment right up to the mark (pink) and increments by means of the knee switch to the following seam segment. Grading is not possible in this case.

2. Via measurement of length (knee lever must be disabled)
   The control increments automatically to the following seam segment as soon as the programmed seam segment is finished. In this case grading is possible.

Programming example “Incrementing with knee switch”

1. Via knee switch (knee switch must be enabled)

   1. Switch to program 3,

   2. Select function segment R1,

   3. Enable knee switch,

   4. Input stitch length 2.5,

   5. Enter,

   6. Continue seam 2.7 2.5,

   7. Feed roll. pr. 2.7 2.5,

   8. Enter,

   9. Continue seam 2.9 2.5,

   10. Feed roll. pr. 2.9 2.5,

2. Via measurement of length (knee lever must be disabled)

   1. Switch to program 3,

   2. Select function segment R1,

   3. Disable knee lever,

   4. Input stitch length 2.5,

   5. Enter,

   6. Continue seam 2.7 2.5,

   7. Feed roll. pr. 2.7 2.5,

   8. Enter,

   9. Continue seam 2.9 2.5,

   10. Feed roll. pr. 2.9 2.5,

   11. Enter.
This sequence can be continued freely until seam segment R 15 is reached.
If a sleeve has, say, only 5 seam segments, the seam end must be programmed after display SEAM CONTINUATION.

Press or until

**END OF SEAM**

The control is set to the first seam segment of the left hand sleeve and this can now be programmed. Display:

**SEGMENT** L1 _._ 2.5

Press or until

**END OF PROGRAM**

Old status line appears, say:

9 R1 0 _._ _._

Recall program number 3

**PROGRAM NO.** 9 _._ _._

3 R1 0 _._ _._

Machine is operational, seam start of right hand sleeve.
Programming example: Incrementing via measurement of length (learn seam length) with grading

1. **INPUT**
2. **FEED ROLL. PR.**
3. **3 SWITCH FUNCT.**
4. **KN. SW. OFF-0 ON-1**
5. **PROGRAM NO.**
6. **SIZE**
7. **STITCH LENGTH**
8. **SEGMENT R1**
9. **SEAMLENGTH**
10. **GRADING VAL.**

Input basic size according to table on page 29 (e.g. 50 for German men’s sizes).

Position workpiece underneath the roller presser and sew first seam segment.

Grading values from 0 to 50 mm are possible.
If in the current seam segment no grading is desired, input 0.
This sequence can be continued freely up to seam segment R 15.
With display in last desired seam segment

\[
\text{SEAMLENGTH} \quad _\_ \quad \text{MM} \quad _\_ \quad _\_
\]
Press \(+\) or \(-\) until

\[
\text{END OF SEAM} \quad _\_ \quad _\_
\]

Press \(+\) or \(-\) until

\[
\text{TEACH} \quad _\_ \quad _\_
\]

After seam start is reached continue sewing for a few stitches, then actuate pedal to second position backwards - sewing threads will be trimmed.
Bring pedal to resting position (position 0) - the control switches to the first seam segment of the left hand sleeve. Display:

\[
\text{SEGMENT} \quad \text{L1} \quad _\_ \quad 2.5
\]

Input desired grading for second seam segment, say, 2 mm.

\[
\text{GRADING VAL.} \quad _\_ \quad \text{MM} \quad 2.8 \quad 2.5
\]

Position workpiece underneath roller presser and sew first seam segment.

\[
\text{SEGMENT} \quad \text{R3} \quad _\_ \quad 2.5
\]

\[
\text{GRADING VAL.} \quad 2\text{MM} \quad 2.8 \quad 2.5
\]
Input desired grading value, say, 0

```
0
```

**GRADING VAL. 0 MM** 2.7 2.5

Enter

**SEGMENT L2** _._ 2.5

Enter

This sequence may be continued freely up to seam segment L 15.

With the following display in the last desired seam segment

**SEAMLENGTH ___ MM** _._ _._

Press [+] or [-] until

**END OF PROGRAM** _._ _._

Enter

**TEACH** _._ _._

After seam start is reached continue sewing for a few stitches, then actuate pedal to 2nd position backwards - sewing threads will be trimmed.

Bring pedal to resting position (position 0) - the control switches to program start. Display:

**PROGRAMMING** _._ _._

The old status line appears, say:

```
9  R1  0  50  _._  _._
```

Recall program number 3.

```
3  R1  0  50  2.6  2.5
```

Machine is operational, seam start on right hand sleeve.

If another ready-made garment size is to be selected, make sure that only a size is selected which is derived from the programmed basic size (see tables on page 29).

Change ready-made garment sizes, say, to 48:

```
3  R1  0  48  2.6  2.5
```

[Diagram]

Program number 3.
Determine the roller presser feed motion for fullness application

Example: seam segment 2 (fig. 20)

Length of seam segment 2, measured at sleeve hole = 100 mm
Selected stitch length (feed wheel) = 2.5 mm
Number of stitches in seam segment 2 = 40 stitches
(100 mm : 2.5 mm stitch length)

Length of seam segment 2, measured at sleeve = 112 mm
Roller presser feed motion: 112 mm : 40 stitches = 2.8 mm

Note:
Depending on the feed behaviour of the material used in the process and on the location of the seam in relation to warp and weft threads it may be necessary to edit the determined value a little bit.

Basic sizes and size tables for grading

Grading means the gradual derivation of smaller and larger sizes from a certain basic size (see fig. 21). The basic sizes that are indicated in the relevant tables constitute the basis for the creation of sewing programs with grading.
Based on these basic sizes the control increases or decreases the seam segments with grading by the factor indicated in the table when another size is selected. Grading values from 0 to 50 mm can be inputted.

Example: 1 mm grading in seam segment 1
4 mm grading in seam segment 2

Length of seam segments in basic size 50 (factor 0)
Seam segment 1 = 35 mm
Seam segment 2 = 100 mm

Length of seam segments in size 48 (factor -1)
Seam segment 1 = 34 mm
Seam segment 2 = 96 mm

Length of seam segments in size 56 (factor 3)
Seam segment 1 = 38 mm
Seam segment 2 = 112 mm

</table>
Select program number

With programmed sewing (program number 1 to 24)

This is possible only if the control is at the sewing program start and the sewing procedure has not been started yet.

Display, say:

```
10  R1  0  50  2.6  2.5
```

![Diagram]

Program No. __ __ __ __

Select desired program number with numeric keys, say 2.

![Diagram]

```
2
```

Program No. 2 __ __ __

Enter

The status line of the selected program appears, say:

```
2  R1  0  50  2.7  2.5
```

The machine is operational.

Note:
If a sewing program has been interrupted (e.g. after thread breakage) and key has been pressed so that the LED is on, a new program number can only be selected after key is actuated again and the LED is off.

With manual sewing (program number 0)

Pedal in resting position (position 0)

![Diagram]

Program No. __ __ __ __

Select desired program number with numeric keys, say 12.

![Diagram]

```
1  and 2
```

Program No. 12 __ __ __

Enter

The status line of the selected program appears, say:

```
12  R1  0 __ __ __
```

The machine is operational.

Sleeve selection

Note:
Sleeve selection is possible only
- in program numbers 3 to 24
- when control is at seam program start and the sewing procedure has not been started yet.

By pressing key the control switches from the right hand to the left hand sleeve and vice versa.

Example:
Display, say:

```
4  R1  0  50  __  __
```

![Diagram]

```
4  L1  0  50  __  __
```

34 PFAFF
Size selection

Note:
Size selection is possible only
- with program numbers 3 to 24 when “sewing” mode is selected
- if seam segment are incremented by means of length measurement and grading is used (knee switch disabled)
- if the control is at the start of the sewing program and the sewing procedure has not been started yet.

By actuating key it is possible to select another size with the numeric keys.
It is only possible to select sizes that are derived from the basic size (see table page 33).

Example:
German men’s size 56 is to be selected.
Display, say:

```
3 R1 0 50 _ _
```

```
SIZE 50 _ _
```

```
5 and 6
```

```
SIZE 56 _ _
```

```
Enter
```

Changing the programmed roller presser feed motion

In order to avoid inputting a new sewing program when using different material with the same program it is possible to increase or decrease the roller presser feed motion by steps of 1/10 mm.

In the display the seam segment indication is followed by the selected difference. With an increase of 0.3 mm e.g.:

```
10 R1 +0.3 50 _ _ 2.5
```

With a decrease of the roller presser feed motion the difference is preceded by a minus sign.

There are two options:

1. Increase or decrease the roller presser feed motion for all seam segments of a program.

   To this end press keys or on the control panel before sewing is started with the control being at the start of the selected program.

2. Increase or decrease the roller presser feed motion for individual seam segments of a program.

   As soon as the control is at the desired seam segment, press keys or on the machine head.

   After incrementing to the following seam segment the selected increase or decrease of the roller presser feed motion will no longer be valid.

Note:
If keys or are pressed when “Manual” is selected (program number 0), the roller presser feed motion is changed immediately and the new feed motion is displayed.
Changing the roller presser feed motion within a certain seam segment

Example: Changing the roller presser feed motion of 2.7 mm to 3.2 mm in seam segment R3.

INPUT _._ 2.5

PROGRAM NO. _ _ _._ 2.5

Select desired program number with numeric keys and press enter key. If desired program number is already displayed, just press enter key.

SIZE _ _ _._ 2.5

until

SEGMENT R1 _._ _._

3

SEGMENT R3 _._ _._

Enter

FEED ROLL. PR. 2.7 _._

and

FEED ROLL. PR. 3.2 _._

The old status line appears, say:

4 R1 0 50 _._ _._

Reworking beginning with a certain sewing segment

In case of a sewing disturbance whilst sewing a certain seam segment (e.g. thread breakage) seam segments can be reworked as follows:

Pedal in rest position (position 0)

Press - LED on

- the sewing program is interrupted
- the control is set at the beginning of the current seam segment

Note:
If necessary you can cycle backwards or forwards by several seam segments - the current seam segment is always displayed in the status line.

to cycle forwards

to cycle backwards

Actuate pedal to the second position backwards
- sewing threads are trimmed
- needle in high position, roller presser is lifted.

Position the workpiece so that the beginning of the current seam segment is directly beneath the needle.

Press - LED off

- the current sewing program is enabled again
- the sewing procedure can be continued.
Editing the length of a learned seam segment

If within a programmed sewing program the learned seam length of a certain seam segment is to be increased or decreased, the following seam segment must be decreased or increased by the same amount.

Example:
Seam segment R2 with a length of 53 mm is to be decreased by 3 mm.
Seam segment R3 has a length of 112 mm.

The changed seam lengths are saved and the machine is operational.
### Example seam: jacket sleeve

Changing the battery of the memory card

In order to avoid damage to the memory card only use 3-Volt-lithium batteries (type BR2325 or similar).

It is necessary to change the battery if the memory card is inserted and the display shows the following error:

```
E36-M.C. BATTERY
```

In order to save the memory card data during the battery change the memory card must be inserted in the system socket of the machine and the power supply must be switched on.

Then carry out battery change as described here:

1. Read program until
2. Battery change completed?

Turn out screw 1 (fig. 22) by 4 to 5 mm.

Secure memory cards with hands so that it cannot be pulled out of the system socket and remove battery mounting 2 from the memory card.

Insert new battery into battery mounting making sure that the plus sign is visible from above.

Push battery mounting 2 into memory card and tighten screw 1.

Now the memory card can be removed, the machine is operational.

Note: Dispose of used batteries appropriately.
Memory Card (Option)

Functions:

- To store up to 480 programs in 20 blocks of 24 programs each.
- To read programs from the memory card to the memory of the machine.
- To write programs on the memory card.

Menu - functions of the memory card

- Insert memory card in the slot beneath the oil reservoir.
Note:
Brand new memory cards have to be formatted before use i.e. prepared for the user’s system.
The command "M.C.FORMATTING" examines the card for defects and prepares it for the storage of data.
If the memory card already contains data this is erased with the formatting command.

The following dialogs correspond to the dialogs from "READ PROGRAM."

5 BATTERY CHANGE Enter COMPLETED ? Enter
